QUESTION 1

Before upgrading networking equipment like switches, a network administrator should first perform some important preparation tasks. What should the network administrator include in the creation of an upgrade policy? (Select two.)

A. Read the release notes of the old operating system.

B. Update network management software before deploying upgrades to network switches

C. Verify remote access connectivity to the device to be upgraded.

D. Make a copy of the old operating system.

E. Test the upgrade in a lab network or a less important part of the network first.

Correct Answer: CE

QUESTION 2

A network administrator is building two IRF domains:

Each access layer switch should have a connection to each distribution layer switch. In this design, how many access switches can the administrator have in the access layer IRF domain before spanning tree is required to remove loops between the two IRF domains?
A. 2

B. 4

C. 6

D. 8

E. 12

Correct Answer: A

QUESTION 3

Refer to the network exhibit.

When should the topology shown in the exhibit be implemented in a network?

A. When roaming is not desired

B. When autonomous mode is needed on the APs

C. When a layer 2 switched network is required

D. When centralized management of APs is required

Correct Answer: C

QUESTION 4

A network administrator is building two IRF domains:

Each access layer switch should have a connection to each distribution layer switch. In this design, how many access switches can the administrator have in the access layer IRF domain before spanning tree is required to remove loops between the two IRF domains?

A. 2

B. 4

C. 6

D. 8

E. 12

Correct Answer: A

QUESTION 5

Which trends of today\\\'s data networks is the HP FlexNetwork Architecture designed to meet? (Select two.)

A. East-west traffic

B. Intelligent Resilient Framework

C. North-south traffic flows

D. Service decentralization

E. Virtualization

Correct Answer: BE
