A network administrator is upgrading the operating system on an HP Comware switch. When copying the new image from a TFTP server to flash of the switch, the process fails because there is not enough flash to store the new operating

system. The new operating system is 3.2MB in size. The network administrator then executes the commands shown in the exhibit.

Which action should the network administrator perform to solve this problem?

- A. Reformat flash and execute the TFTP upgrade command.
- B. Execute the clear Flash command and perform the TFTP upgrade again.
- C. Execute the reset recycle-bin command and perform the TFTP upgrade again.
- D. Execute the delete eld.app command and execute the TFTP upgrade command.

Correct Answer: C

When you delete a file with HP switches, it moves the file to the recycle bin and the file still occupies storage space. To permanently delete the file from the recycle bin, execute the reset recycle-bin command in the original directory of the file.
