QUESTION 4

A network administrator has a network of HP ProVision switches with operator and manager passwords configured. The network administrator uses the copy config startup-config tftp pc command on each switch to save all the switch configuration to a TFTP server. The network administrator copies the configuration from one HP ProVision 3800 switch to an identical HP ProVision 3800 switch. The new switch no longer prompts for an operator or manager passwords.

What is the cause of this problem?

A. The passwords must the saved by using a separate TFTP transfer with the copy passwords tftp pc command.

B. The passwords cannot be restored they contain special characters misunderstood by the TFTP server.

C. The passwords cannot be restored by default, to the startup-config file on the switch when executing the write memory command.

Correct Answer: C

QUESTION 5

Which HP Comware component allows a network administrator to adjust the logging process?

A. SNMP management center

B. Information center

C. Logging process

D. System logging center

Correct Answer: B

Acting as the system information hub, information center classifies and manages system information, offering a powerful support for network administrators and developers in monitoring network performance and diagnosing network problems. The following describes the working process of information center:

Receives the log, trap, and debugging information generated by each module. Outputs the above information to different information channels according to the user-defined output rules. Outputs the information to different destinations based on the information channel-to-destination associations.
