**QUESTION 1**

A network administrator executes these commands on an HP Comware switch:

```
[Comware] super password level 1 simple hp1 [Comware] super password level 2 simple hp2 [Comware] super password level 3 simple hp3 [Comware] quit
```

The network administrator then executes this command to test the configuration:

```
super 0
```

What is the outcome of the configuration?

- A. The network administrator is immediately placed into Monitor view.
- B. Access is denied because no level 0 password has been defined.
- C. A password of hp0 must be entered to access the view.
- D. The network administrator is immediately placed into visitor view.

Correct Answer: D

**QUESTION 2**

When LLDP is enabled, which value is presented by default as the LLDP Chassis ID on both ProVision and Comware switches?

- A. Router ID
- B. System Name
- C. IP address
- D. MAC address

Correct Answer: D

```
display lldp local-information Global LLDP local-information: Chassis ID : 00e0-fc00-5600 System name : Sysname
System description : H3C Comware Software. H3C S12508 Product Version S12500-C MW710B01BBIT25. Copyright
(c) 2004-2011 Hangzhou H3C Tec h. Co., Ltd. All rights reserved. System capabilities supported : Bridge, Router
System capabilities enabled : Bridge, Router
```

```
MED information: Device class : Connectivity device MED inventory information of master board: HardwareRev : REV.A
FirmwareRev : 109 SoftwareRev : 5.20 Alpha 2101 SerialNum : NONE Manufacturer name : H3C Model name : H3C
Comware Asset tracking identifier : Unknown Table 1 Command output Field Description Global LLDP local-information
Global LLDP information to be sent. Chassis ID Bridge MAC address of the device.
```

**QUESTION 3**

Which STP protection feature does HP recommended against rogue switches?

- A. Root Protection should be enabled on access layer switches.
- B. BPDU Protection should be enabled on edge ports and uplink ports.
- C. Root Protection should be enabled on access and aggregation layer switches.
- D. BPDU Protection should be enabled on edge ports.

Correct Answer: D

We want to enable BPDU protection on any "edge ports", or ports that are connected to end user devices (PCs, printers, etc.) -- any device that should not be sending out STP BPDU's. Without BPDU protection, a malicious (or ignorant) user could plug a switch into our network and alter the spanning tree topology.

---

**QUESTION 4**

Which open standard allows a switch with PoE support to correctly determine the power requirements of a connected device?

- A. ICMP
- B. AutoPower
- C. LLDP-MED
- D. CDP

Correct Answer: C

The Link Layer Discovery Protocol (LLDP) is a vendor-neutral link layer protocol in the Internet Protocol Suite used by network devices for advertising their identity, capabilities, and neighbors on an IEEE 802 local area network, principally wired Ethernet. Media Endpoint Discovery is an enhancement of LLDP, known as LLDP-MED, that provides the following facilities:

Auto-discovery of LAN policies (such as VLAN, Layer 2 Priority and Differentiated services settings) enabling plug and play networking. Device location discovery to allow creation of location databases and, in the case of Voice over Internet Protocol (VoIP), Enhanced 911 services. Extended and automated power management of Power over Ethernet (PoE) end points.
