**QUESTION 1**

A network administrator deletes old files in the flash file system of an HP Comware switch. The administrator then notices that the amount of free space available has not changed. Which command must the administrator execute to free up the space from deleted files?

- A. reset recycle-bin
- B. recycle-bin cleanup
- C. cleanup recycle-bin
- D. recycle-bin empty

Correct Answer: A

---

**QUESTION 2**

What is the purpose of a management VLAN on an HP Provision switch?

- A. To prevent IP addresses from being configured on any VLANs other than the management VLAN
- B. To provide an administrative-only marker, label, or alias for the VLAN where IMC is installed
- C. To identify a specific VLAN as the only VLAN from which users can connect to the switch management interface
- D. To limit remote access connections by specifying the IP addresses that can establish connections

Correct Answer: C

---

**QUESTION 3**

A customer has an HP ProVision switch capable of Layer 3 forwarding; however, Layer 3 forwarding is disabled. The switch has an IP address in the management VLAN, where the default gateway is 10.1.1.1, which ProVision command should the network administrator use so the ProVision switch can access the Intelligent Management Center (IMC) server in a different VLAN?

- A. IP default-gateway 10.1.1.1
- B. IP route 0.0.0.0 255.255.255.255 10.1.1.1
- C. Default-route 10.1.1.1
- D. IP route 0.0.0.0.0.0.0 10.1.1.1

Correct Answer: D

A default route is a special static route that applies to all traffic. Typically, when the router receives a packet that it does not know how to forward, it drops it. A default route allows the router to forward all such packets toward the destination most likely to be able to route them.

To configure a default route, enter a route to a destination address of all zeros with an all-zero subnet mask. The all-zero subnet mask indicates to the router that a packet's IP address does not have to match any of the destination address

bits in order for the route to be valid. Because the router always matches traffic to the most specific route, it will only use the default route for traffic that would otherwise be dropped. To configure the default route, move to the global

configuration mode context and enter this command:

Syntax: `ip route 0.0.0.0 [0.0.0.0 | /0] []`

The ProCurve Secure Router allows you to enter the default route in CIDR notation.

---

#### QUESTION 4

A network administrator enters this command on an HP Comware switch:

```
save
```

In interactive mode, the administrator is prompted to save to a file named config.cfg and confirms the save. What is the effect of these actions?

- A. The current configuration is saved to config.cfg on a TFTP server but is not used for the startup-config.
- B. The startup-config, rather than the correct configuration, is saved to config.cfg on a TFTP server.
- C. The current configuration is saved to config.cfg in the flash but is not used for the startup-config.
- D. The current configuration is saved to config.cfg in the flash and is used for the startup- config.

Correct Answer: D

---

#### QUESTION 5

Refer to the exhibit.

```
<Switch> display port trunk
Interface          PVID    VLAN passing
GE1/0/19           1       1,11
```

The network administrator has configured this port to permit all VLANs. The output in the exhibit indicates that the port is only passing VLANs 1 and 11. The administrator wants the port to pass VLAN 12 as well. What should the administrator do to accomplish this?

- A. Enable IP routing.
- B. Add VLAN 12 to the switch.
- C. Change the port link-type to hybrid.

D. Change the port link-type to access.

Correct Answer: A
