**QUESTION 1**

How do you perform a tailback of a service set running on node two after you fix hardware issues on an HP StoreOnce Multi-node system?

- A. Execute ^hardware fallback node2.
- B. Perform a regular shutdown of both nodes.
- C. Restart Service Set one on node two.
- D. Reboot the IBRIXfile system.

Correct Answer: C

QUESTION 2

You are using Catalyst and duplication to size an OST solution for a Symantec NetBackup customer. Which statement is true regarding HP StoreOnce 6500 Backup system licensing options?

- A. Only the source system has to be licensed.
- B. The initial couplet on the target side has to be licensed.
- C. The source and target systems have to be licensed.
- D. Only the target system has to be licensed.

Correct Answer: C

QUESTION 3

Your customer implements some changes within the existing TCP/IP environment. The changes affect the existing HP StoreOnce Multi-node environment and the current backup infrastructure. How can you apply the new network configuration on the HP StoreOnce 6500 Backup system?

- A. Replace the old configuration with the correct TCP/IP information using the CLI parameter Pnet set change, and reboot the cluster nodes.
- B. Configure an alternate network template, and then re-apply the template with all the modified network settings.
- C. Access the console of the first node, change all the parameters, and sync the nodes within the cluster.
- D. Modify the configuration using the GUI (Device configuration - Network), and apply the configuration.

Correct Answer: A

QUESTION 4

You want to upgrade the firmware on an HP StoreOnce Backup system. Match each step to the correct action.

list rpm files	<input type="text"/>
repository folder content	<input type="text"/>
list all the packages staged	<input type="text"/>
unpack the package into /stage/packages	<input type="text"/>

Hot Area:

list rpm files	<input type="text"/> <div style="border: 1px solid black; padding: 2px;">StoreOnce_Master.rpm system show repository system load package StoreOnce_Master.rpm system show packages</div>
repository folder content	<input type="text"/> <div style="border: 1px solid black; padding: 2px;">StoreOnce_Master.rpm system show repository system load package StoreOnce_Master.rpm system show packages</div>
list all the packages staged	<input type="text"/> <div style="border: 1px solid black; padding: 2px;">StoreOnce_Master.rpm system show repository system load package StoreOnce_Master.rpm system show packages</div>
unpack the package into /stage/packages	<input type="text"/> <div style="border: 1px solid black; padding: 2px;">StoreOnce_Master.rpm system show repository system load package StoreOnce_Master.rpm system show packages</div>

Hot Area:

list rpm files

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

repository folder content

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

list all the packages staged

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

unpack the package into stage/packages

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

Correct Answer:

list rpm files

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

repository folder content

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

list all the packages staged

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```

unpack the package into stage/packages

```
StoreOnce_Master.rpm
system show repository
system load package StoreOnce_Master.rpm
system show packages
```
