QUESTION 2

How does HP TippingPoint provide filter updates?

- A. TippingPoint Operating System
- B. IGRP
- C. Digital vaccine
- D. Hot Patch Install

Correct Answer: C

Digital Vaccine filters Using HP TippingPoint's Threat Management Center (TMC), the DVLabs team continually searches for emerging vulnerabilities and develops new attack filters to block network attacks. Filter updates provide rapid inoculation against emerging threats. Digital Vaccine filters are delivered at least once per week or on a prioritized basis as critical vulnerabilities are identified; filters can be deployed automatically with no user interaction required.

QUESTION 3

What does the typical SYN flood attack involve?

- A. data center humidity errors
- B. an attacker sending many spoofed TCP SYN packets
- C. congestion from the inspection segment
- D. interface errors that result in congestion

Correct Answer: B

The Advanced DDoS system provides the following types of protection:

SYN Proxy -- Protects against SYN floods of the system. An attacker floods a server with malicious connection requests (TCP SYNs) with spoofed source IP addresses, preventing legitimate clients from accessing the server.
