**QUESTION 1**

Which statement is true about a JBOD?

- A. It is configured as a RAID 0 by default.
- B. It contains a minimum of one hot spare disk.
- C. It offers no data redundancy or striping
- D. It is connected to a minimum of two hosts by default.

Correct Answer: C

{\rtf1\ansi\ansicpg936\deff0\deflang1033\deflangfe2052{\fonttbl{\f0\fnil\charset0 MS Shell Dlg 2;}}\viewkind4\uc1\pard\lang2052\f0\fs17 Industry Standard Architecture - Student Guide 1 - Page 250\par Just a bunch of disks (JBOD) is a storage option that connects one or more standalone disk drives to a RAID controller or other drive controller of a server. This option increases capacity and is used for noncritical business data.\par The JBOD drive does not become part of a RAID array, but it is made available to the server on the same interconnect bus as the other devices controlled by the RAID controller. The JBOD disk drive has no data redundancy or striping.\par }

QUESTION 2

What must you check prior to adding another processor to an existing system? (Select Three)

- A. amount of memory in the system
- B. compatibility of the new processor with existing processors
- C. firmware requirements for the new processor
- D. number of users currently logged into the system
- E. number of processors the operating system supports
- F. weight of the new processor

Correct Answer: BCE

{\rtf1\ansi\ansicpg936\deff0\deflang1033\deflangfe2052{\fonttbl{\f0\fnil\charset0 MS Shell Dlg 2;}}\viewkind4\uc1\pard\lang2052\f0\fs17 Industry Standard Architecture - Student Guide 2 - Pages 163/164: \par Processor compatibility\par The new processor must be physically compatible with the processor slot on the system board. A requirement for multi-processor systems is compatibility of the new processor with the existing processors. \par Operating system update or reconfiguration\par On a multi-processor server, the operating system must be capable of handling more than one processor. If the OS version does not support more than one processor, it must be updated to a version that does support multiple processors.\par BIOS update\par It usually is necessary to update the system BIOS to support the increased speed or cache size of a new processor. Once again, it is necessary to check the documentation provided by the server manufacturers, who often provide new BIOS versions on their web sites.\par }

QUESTION 3

Which kind of RAID best suits database log files and offers redundancy and usually better performance?

A. RAID 0

B. RAID 1

C. RAID 5

D. RAID 6

Correct Answer: B

QUESTION 4

You want to prevent a service from starting in the future, as it causes abnormally heavy load in a Windows 2003 Server. What do you do?

A. Navigate to C:\WINDOWS\system32 and rename the service.

B. Open the Control Panel folder, choose System Properties, and change the startup settings.

C. Open a command line window and type net stop

D. Right-Click My Computer, select Manage, go to Services, and set the service to Disable.

Correct Answer: D

QUESTION 5

In the GFS backup tape rotation plan, which type of backup is the Father?

A. copy

B. normal

C. differential

D. incremental

Correct Answer: B

{\rtf1\ansi\ansicpg936\deff0\deflang1033\deflangfe2052{\fonttbl{\f0\fnil\charset0 MS Shell Dlg 2;}}\viewkind4\uc1\pard\lang2052\f0\fs17 Industry Standard Architecture - Student Guide 2 - Page 302:\par Grandfather-Father-Son tape rotation \par The system administrator typically performs a full backup every Monday (father) and incremental backups on Tuesdays, Wednesdays, and Thursdays (sons). The administrator performs another full backup at the end of the week (father) and another at the end of the month (grandfather).\par }
