QUESTION 1

Where can you find an overall system health status of a ProLiant server blade that is running a Windows operating system?

- A. System Management Homepage
- B. Support Tool Manager
- C. Computer Management
- D. Device Manager

Correct Answer: A

QUESTION 2

What should be run in the Virtual Connect Support Utility (VCSU) before initiating a Virtual Connect firmware upgrade?

- A. Show all
- B. VC Support Dump
- C. Health Check
- D. Show Config

Correct Answer: C

QUESTION 3

You cannot get to the network from any of the server blades in a c7000 enclosure with 10GbE Pass-Thru modules.

What should you verify first for proper connectivity to the network?

- A. Correct SFPs are installed
- B. External switch supports at least Gigabit speed
- C. Interconnect link between the Pass-Thru modules
- D. External switch set to half duplex

Correct Answer: C

QUESTION 4

How can you verify that the system and option ROMs in a ProLiant server are the latest version?

- A. Review the information in the Insight Display
- B. Launch the Intelligent Management Center and view updates.
- C. Restart the server and review ORCA
- D. Restart the server and review POST.

Correct Answer: A

QUESTION 5

A support engineer needs to add memory to a ProLiant ML350p Gen8 server.

What should the engineer consider when selecting the DDR3 DIMMs to install in this server?

- A. Unbuffered DIMMs (UDIMMs) are supported and meet low power and large capacity requirements.
- B. Registered DIMMs (RDIMMs) are supported offer larger capacities than UDIMMs, and include address parity protection.
- C. Hypercloud DIMMs (HDIMMs) are supported and operate at four DIMMs per channel with all memory channels populated.
- D. Load Reduced DIMMs (LRDIMMs) are supported, use the least power, and have the lowest latencies for the same memory clock speeds

Correct Answer: A
