QUESTION 1

Which statements are correct about the ProLiant warranty service level agreement? (Select two.)

- A. A travel and labor charge applies when customers decline to replace an optional CSR part.
- B. A travel and labor charge does not apply when customers decline to replace an optional CSR part.
- C. A travel and labor charge applies when customers decline to replace a mandatory CSR part.
- D. A travel and labor charge does not apply when customers decline to replace a mandatory CSR part.

Correct Answer: BC

Server Warranty includes 3-Year Parts, 3-Year Labor, 3-Year Onsite support with next business day response. Warranty repairs may be accomplished through the use of Customer Self Repair (CSR) parts.

These parts fall into two categories:

- 1) Mandatory CSR parts are designed for easy replacement. A travel and labor charge will result when customers decline to replace a Mandatory CSR part (C);
 - 2) Optional CSR parts are also designed for easy replacement but may involve added complexity. Customers may choose to have HP replace Optional CSR parts at no charge (B)
-

QUESTION 2

What is the term that describes the full backup typically performed by a system administrator every week?

- A. grandfather, father, son
- B. fathers
- C. grandmothers
- D. sons

Correct Answer: A

GRANDFATHER-FATHER-SON BACKUP STRATEGY

GFS (grandfather, father, son) is a tape rotation strategy. GFS simplifies tape handling by organizing rotation into daily, weekly, and monthly backup tapes. You can also create Custom backup jobs that use the GFS strategy.

QUESTION 3

Which type of memory is used on the Smart Array controller cache?

- A. SDRAM
- B. SRAM

C. RDRAM

D. DRAM

Correct Answer: D

Error checking and correcting (ECC) DRAM technology protects the data while it is in cache. Smart Array battery-backed or flash-backed cache backup mechanisms protect the cache data against a server crash and power loss.

QUESTION 4

Match the correct UPS description with each picture.

QUESTION 5

What does incremental backup do?

- A. copies all files that were changed after the last full backup
- B. backs up all files
- C. backs up without resetting the archive bit
- D. copies all files that were changed since the last complete backup and resets the archive bit

Correct Answer: D

An incremental backup includes only those things that have changed since the previous backup and saves those things into a separate, additional, backup file or location. By definition, the first incremental backup is a full backup; it backs up everything since there's no "previous backup" to compare to. The second incremental backup backs up only those files that have changed since the previous backup was taken.
