When installing a rack in a data center, which way should the racks face?

- A. Install front to back facing a hot aisle.
- B. Install back to front facing a hot aisle.
- C. Install front to front facing a cold aisle.
- D. Install front to back facing a cold aisle.

Correct Answer: D

Thermal considerations If multiple rows of rack mounted equipment are installed, the facility may take advantage of the front-to- back airflow by arranging racks front-to-front and back-to-back. Conditioned air registers may then be oriented along the "front" aisles and the return air registers in the "back" aisles. Organizations implementing a large drive array should consider RAID 6 because it can tolerate up to two simultaneous drive failures without downtime or data loss.
