QUESTION 1

A network administrator is setting up a wireless network secured by 802.1X authentication in EAP mode with an HP BYOD solution. What is an important concept to remember when configuring a Windows laptop to access the wireless network?

A. Root certificates from a Certificate Authority are not needed. The laptop will validate the RADIUS certificate using its client certificate.

B. Do not validate any certificates sent by the RADIUS server. This may cause security issues.

C. User Access Manager can self-generate its own certificate, and this kind of certificate does not need any validation.

D. To automatically validate a certificate sent by User Access Manager (UAM), a client must have a root certificate from the Certificate Authority that issued the UAM certificate

Correct Answer: A

QUESTION 2

A customer is planning to deploy HP MSM466-R access points in an extreme cold environment to interconnect to the Unified Wired-WLAN Module in the HP switch. Which requirement is needed to accomplish this?

A. NEMA 4X enclosures should be used to house the access points.

B. Switch ports must support PoE.

C. PoE redundancy must be enabled on the interface.

D. Access Point must deploy internal antennas.

Correct Answer: B

QUESTION 3

Refer to the exhibit.
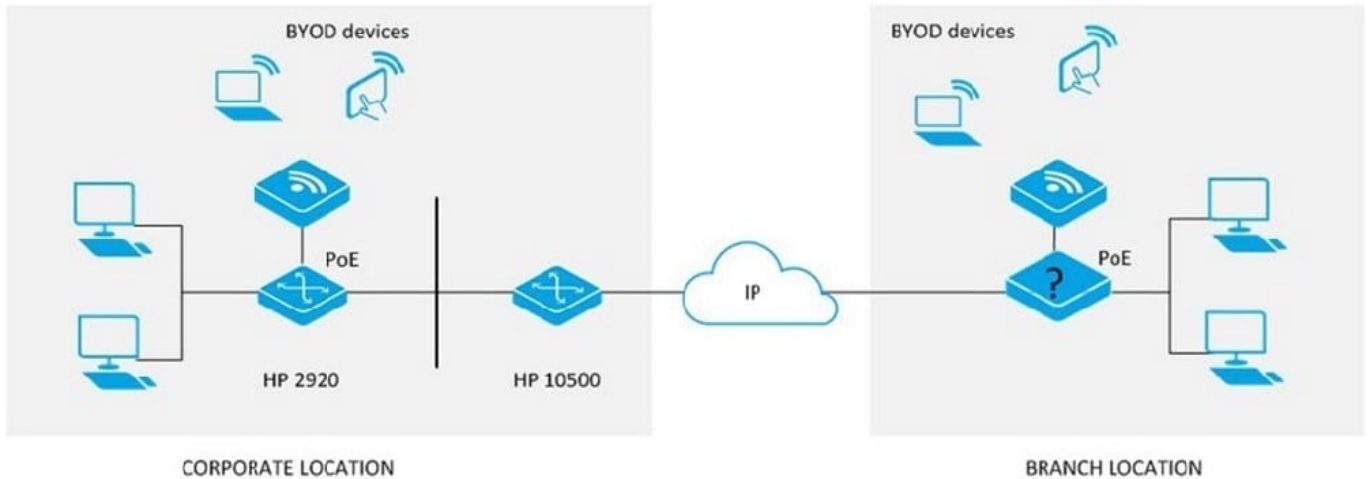

A company wants to connect a mid-size branch office to their corporate location. An HP 10500/7500 Unified Wired-Wireless module is deployed at the corporate location. A maximum of six HP MSM access points will be deployed at the branch location.

Which HP device meets these customer requirements and is the most cost effective solution for the branch location?

A. HP 830

B. HP 870

C. HP 2920

D. HP 7500

Correct Answer: A

QUESTION 4

Which components participate in the HP BYOD authentication process? (Select two.)

A. HTTP agent

B. Wireless Service Manager (WSM)

C. User Access Manager DHCP agent

D. User Access Manager

E. BYOD portal server

Correct Answer: BD
