### QUESTION 1

A storage integrator is installing an HPE MSA 2042 into a remote location as a part of warehouse automation solution. The site has no IT staff and warehouse employees will not be granted access to the location where the MSA will be installed. The customer is concerned about the inability to control individual AC power outlets connected to the MSA.

Which HPE power delivery equipment can be added to the solution to address these requirements? (Choose two.)

- A. HPE G2 Metered and Switched PDU
- B. HPE Standard Series G2 Basic PDU
- C. HPE iPDU
- D. HPE G2 Metered PDU

Correct Answer: CD

---

### QUESTION 2

An HPE StoreVirtual 3200 solution specifies 802.3ad (LACP) bonding is required for the network interfaces. What must be considered when implementing this solution?

- A. Only one of the chosen network interfaces will actively pass traffic.
- B. The network interfaces chosen may operate at the different speeds.
- C. Additional switch configuration will be necessary.
- D. The network interfaces chosen must be cabled to different switches.

Correct Answer: C

HPE StoreVirtual 3200 provides three options for the teaming/bonding of the network ports on each storage controller--Active-Passive, Link Aggregation Dynamic Mode (LACP), or Adaptive Load Balancing (ALB) bonding. The simplest solution, the Active-Passive bonding, utilizes only one of the available network ports per controller. The most complex solution, the LACP (802.3ad) bonding, delivers bandwidth aggregation and redundancy across both controller network ports but requires additional switch configurations such as IRF trunking. The preferred and recommended bonding mode is ALB, where the network ports may be connected to different switches, therefore, support switch failover.

---

### QUESTION 3

A customer has HPE Data Protector and a StoreOnce VSA at a remote site that must replicate to the corporate data center StoreOnce backup device. What considerations must be taken into account to allow for Catalyst replication?

- A. Data Protector Catalyst replication will rehydrate the data on the StoreOnce VSA then write to the data center StoreOnce.
- B. Data Protector will write 2 backups: one to the StoreOnce VSA, the other to StoreOnce at the data center.

- C. Data Protector Catalyst replication requires gateways to both sites to use Object copy.
- D. Data Protector Catalyst replication is configured through the replication license on the StoreOnce VSA.

Correct Answer: C

#### QUESTION 4

Click on an available port that can be used to connect an HPE 3PAR StoreServ 8000 to drive enclosures. (Click on the correct port.)

Hot Area:

Correct Answer:

#### QUESTION 5

A storage integrator is validating an HPE 3PAR StoreServ implementation. The integrator created a volume in the HPE 3PAR StoreServ Management Console (SSMC) and needs to verify read/write access from a Linux operating system. Which steps are part of the verification process? (Choose two.)

- A. Select Hosts under the Servers menu section, and click Create server.
- B. Select the volume in the Virtual Volumes section, and click Map Volume in the Actions menu.
- C. Select the host in the Servers section, and click Add permission in the Actions menu.

D. Select the volume in the Virtual Volumes section, and click Export in the Actions menu.

E. Select Hosts in the Block Persona menu section, and click Create host.

Correct Answer: AB
