**QUESTION 1**

A Customer is requesting a product that enables them to maintain the backup in their HPE Data Protector Software and to replicate the data without the need for re-hydration.

Which product should you recommend\?

- A. HPE StoreOnce Catalyst
- B. HPE Tape Library +
- C. HPE VTL
- D. HPE NAS Store

Correct Answer: A

QUESTION 2

When designing a backup solution using the Centralized Server Backup model, what must be considered?

- A. Dedicated SAN backup fabric is required.
- B. LAN performance may be a bottleneck
- C. There may be increased media management difficulties.
- D. There may be a decrease in the number of tape libraries.

Correct Answer: B

QUESTION 3

A customer needs to offload disk I/O caused by nightly backups from their production HPE 3PAR StoreServ Disk Array. They have two other HPE 3PAR Disk Arrays. One is located at their disaster recovery (DR) site located 300 km away, and the other is used for their Test/Dev environment located in the same datacenter.

What should you recommend to accomplish this? (Select two)

- A. Set up HPE 3PAR synchronous replication between the production and Test/Dev disk arrays.
- B. Create a snapshot of the replicated volumes on the production array and present to the backup system.
- C. Set up HPE 3PAR synchronous replication between the production and DR disk arrays.
- D. Create a snapshot of the replicated volumes on the Test/Dev array and present to the backup system.
- E. Set up HPE 3PAR enhanced asynchronous replication between the production and DR disk arrays.

Correct Answer: AD

QUESTION 4

Which capability is available to use with HPE StoreEver tape libraries, along with software drivers that provide MPIO?

- A. partitioning of tape libraries
- B. backups through Fibre Channel
- C. advanced path failover
- D. offloading backups to tape

Correct Answer: C

QUESTION 5

A customer is using HPE StoreOnce VSA as a NAS target in a remote office backup architecture. Which feature allows the customer to perform a deduplication-optimized copy to the central office?

- A. catalyst-based replication
- B. hash-based chunking
- C. remote snapshots
- D. low bandwidth replication

Correct Answer: A
