**QUESTION 1**

A customer has acquired another company with a large install base of HPE BladeSystem servers with Virtual Connect managed by HPE OneView. The customer needs the ability to easily record its new assets in its configuration management database (CMDB).

Which approach should the architect recommend to the customer?

- A. Use VCEM to create a customized report to find all blade servers, and use the results for import into the CMDB.
- B. Back up the HPE OneView appliance database, and use the bulk copy capability of the CMDB to insert the records.
- C. Use the REST API to retrieve a list of server resources and their properties from the HPE OneView appliance for import into the CMDB.
- D. Use iLO Federation groups, and select the multi-system view to gather the hardware types and serial numbers of each server in the group for import into the CMDB.

Correct Answer: C

QUESTION 2

A customer needs to encrypt local drives on its HPE Proliant Gen8 and Gen9 servers. The customer needs to manage the encryption centrally.

Which HPE products and features should the architect recommend to meet the customer's needs?

- A. HPE Smart Array Px1x and Px2x family of controllers, the Trusted Platform Module, and iLO Advanced
- B. HPE Smart Array Px3x and Px4x family of controllers, the HPE Enterprise Secure Key Manager, and iLO Advanced
- C. HPE Smart Array Px3x and Px4x family of controllers, the Trusted Platform Module, and iLO Select
- D. HPE Smart Array Px1x and Px2x family of controllers, the HPE Enterprise Secure Key Manager, and iLO Select

Correct Answer: B

QUESTION 3

HPE Proliant Gen9 Value	Customer Benefits
accelerate application performance	1 million IOPS with 12 Gb/s Array fast controllers
increased capacity and lower TCO	saves in storage, networking, and cabling
move faster with management automation	visioning with software-defined network

Sort the three sequential steps that are taken for network traffic processing with QoS rules in the correct order by dragging the actions from the left to the action sequence on the right. (Note: Not all actions will apply.) (Select three.)

Correct Answer:

QUESTION 4

A customer needs to improve the performance of a CPU intensive application running on an HPE ProLiant DL 360 Gen9 server with an Intel Xeon E5 processors. The architect proposes to add an Intel Phi coprocessor extensions to the server.

What should an architect verify to ensure the coprocessor will improve application performance?

- A. that the application is able to work in a clustered environment
- B. that the application is highly parallel, and can scale to more than one hundred threads
- C. that the server is connected with a 40Gb/s network interface card
- D. that the server has a minimum of 24 GB ECC-capable RAM installed

Correct Answer: D

QUESTION 5

A solutions architect is designing an HPE ProLiant BladeSystem and HPE StoreVirtual storage solution for a customer, and needs to estimate power requirements.

Which HPE tool should the architect use?

- A. HPE Insight Management Sizer
- B. HPE OneView

C. HPE Power Advisor

D. HPE Power Discovery Services

Correct Answer: C
