QUESTION 1

How are resources allocated to EPIC virtual nodes?

- A. Tenant Admins create and edit flavors to define resource requests, and Tenant Members select the flavors for virtual nodes they create.
- B. The platform provides three default flavors to define how resources are allocated, and only Site Admins can edit those flavors.
- C. Site Admins use templates to define resources for virtual nodes, and Tenant Admins can edit these templates.
- D. Tenant Admins create and edit templates to define how resources are allocated, and Tenant Members can view, use, and edit those templates.

Correct Answer: B

QUESTION 2

You need to set up email alerts.

When do you need to exec into the Ezmeral Container Platform controller's "epic-nagios" container, as opposed to using the Web UI?

- A. When you want to set a custom source email address for the alerts
- B. When the controller DNS server does not have an entry for the destination email domain
- C. When you want to specify multiple destination email addresses and groups
- D. When you want to send an alert to an SNMP version 3 server

Correct Answer: B

QUESTION 3

What is a setting that you are allowed to change after you deploy a Kubernetes cluster?

- A. The number of hosts assigned to a role
- B. The type (data fabric or non-data fabric)
- C. The pod network range
- D. The authentication settings

Correct Answer: A

QUESTION 4

A customer needs an Ezmeral Container Platform solution for supporting a mix of stateful and stateless applications. The customer also wants the platform to host Ezmeral Data Fabric on Kubernetes.

Which systems are recommended for the Data Fabric workers?

- A. SimpliVity 380s
- B. Synergy 380s
- C. Apollo 4200s
- D. Apollo 6500s

Correct Answer: D

QUESTION 5

You have used Ezmeral Container Platform to create a Kubernetes cluster, which has 3 conductor (master) nodes for HA and 12 workers. Which correctly describes how the platform manages this cluster?

- A. The controller elects one conductor as the primary conductor and places the other conductors in standby mode.
- B. The controller places the conductor nodes in standby mode and takes over as the active conductor for the Kubernetes cluster.
- C. The controller sends API requests through the gateway, which load balances them across the conductor nodes.
- D. The controller can manage the cluster, but using HA for the conductors limits a few features such as Data Taps and the Web Terminal.

Correct Answer: A
