```

A server administrator using the REST API is troubleshooting the error seen in the exhibit. What needs to be fixed in the command?

- A. add the missing authentication token to the header
- B. change http to https in the URL
- C. change the "login-sessions" string in the URL to "login-session"
- D. change the POST method to PUT

Correct Answer: D

**QUESTION 4**

When the HPE OneView appliance starts up for the very first time, what is the administrator required to do immediately after logging in for the first time?

- A. Configure the management IP
- B. Add licenses
- C. Change the Administrator password
- D. Create a backup

Correct Answer: B

### QUESTION 5

After assigning a server profile to an HPE ProLiant blade, you notice that the serial number being reported on the server profile page is not the one that matches the label on the server. You want the reported serial number to match the label. What do you need to do?

- A. Create a new Server Profile and go to the "Advanced" section, then change the radio button for the serial number/UUID from "Virtual" to "Physical" and apply it to the server.
- B. Edit the Server Profile and go to the "Advanced" section, then change the radio button for serial number/UUID from "Virtual" to "Physical".
- C. Create a new Server Profile Template and go to the "Advanced" section, then change the radio button for the serial number/UUID from "Virtual" to "Physical".
- D. Edit the Server Profile and go to the "Advanced" section, then change the radio button for serial number/ UUID from "Virtual" to "Physical" and enter the serial number.

Correct Answer: D
