QUESTION 1

An administrator is configuring a server profile template, but does not see the Ethernet network called "VLAN 210" that had been created earlier. What could the cause be?

- A. VLAN 210 was never configured in the Logical Interconnect Group.
- B. VLAN 210 does not exist on the upstream switches.
- C. VLAN 210 is already in a Network Set.
- D. VLAN 210 has Private Network enabled.

Correct Answer: B

QUESTION 2

Refer to the exhibit.

Create Volume

General

General

Volume template **Hyper-V** X

Volume template description not set

Storage pool cgp-growth-limit-IT18

Storage System ThreePAR-1

Volume Properties

Capacity 20.00 GiB

Sharing ☒ Private ☐ Shared

Change Volume Template to "Hyper-V"

Create

Create +

Cancel

An administrator is creating new volumes in preparation for a new Hyper-V cluster. On the Create Volume screen, the storage administrator notices that the capacity of the volume can't be edited. What is preventing the administrator from increasing the volume size?

- A. The capacity is a locked value in the volume template.
- B. The storage pool is out of capacity, so no additional storage can be allocated.
- C. The wrong storage system is selected.
- D. The administrator doesn't have permissions to create volumes.

Correct Answer: C

**QUESTION 3**

Identify the HPE OneView object you would use to accomplish each task.

Select and Place:

Answer Area**OBJECT**

Enclosure Group

Logical Interconnect

Logical Interconnect Groups

Network Set

TASK

Quickly add/remove associated Ethernet networks across one or more server profiles

Define Virtual Connect configuration policy with uplinks, associated networks, QoS and advanced Ethernet settings

Active configuration of interconnect modules within a logical enclosure including uplinks, downlinks and stacking links

Common collection of settings and LIGs used across multiple enclosures

Correct Answer:

Answer Area**OBJECT**

Network Set
