**QUESTION 1**

After assigning a server profile to an HPE ProLiant blade, you notice that the serial number being reported on the server profile page is not the one that matches the label on the server. You want the reported serial number to match the label. What do you need to do?

- A. Create a new Server Profile and go to the "Advanced" section, then change the radio button for the serial number/UUID from "Virtual" to "Physical" and apply it to the server.
- B. Edit the Server Profile and go to the "Advanced" section, then change the radio button for serial number/UUID from "Virtual" to "Physical".
- C. Create a new Server Profile Template and go to the "Advanced" section, then change the radio button for the serial number/UUID from "Virtual" to "Physical".
- D. Edit the Server Profile and go to the "Advanced" section, then change the radio button for serial number/ UUID from "Virtual" to "Physical" and enter the serial number.

Correct Answer: D

QUESTION 2

What is the eTag attribute of resource objects used for?

- A. to identify the version of the IP protocol
- B. to identify the current revision of the resource
- C. to identify the server in a bay
- D. to identify the server profile assigned to a bay

Correct Answer: B

QUESTION 3

A customer creates a server profile template with two new volumes. The first is an 8GB LUN for the boot drive. The second is a 500GB LUN for the ESXi cluster. shared storage. After the server profiles are assigned to the servers they each have an 8GB drive and a 500GB drive but the 500GB drive isn't shared across the member nodes within the cluster.

- A. Both volumes were created as Private.
- B. Both volumes were created as Private.
- C. ESXi can't share drives created dynamically via HPE OneView.
- D. Mapping multiple LUNs aren't supported with HPE OneView Server Profile Templates.

Correct Answer: A

QUESTION 4

Refer to the exhibit.

The screenshot shows the RESTClient interface. At the top, there are tabs for Authentication, Headers, and View. On the right, there are links for Favorites, Data migration, and the RESTClient title. The main section is titled '[-] Request'. It shows a POST method to the URL 'http://192.168.19.41/rest/login-session'. The body contains a JSON object: {"userName": "administrator", "password": "iloverest", "authDomain": "LOCAL"}. Below the request section, there is a 'Headers' section showing 'X-API-Version: 500' and 'Content-Type: //application/json'. The 'Body' section shows the JSON payload. At the bottom, there is a '[-] Response' section with three tabs: Headers, Response, and Preview. The 'Response' tab is selected, showing a 500 error response: 1 {"errorSource": null, "nestedErrors": [], "errorCode": "GENERIC_HTTP_403", "data": {}, "recommendedActions": ["Check the request URI, then resend the request."], "details": "You are allowed to access the requested resource.", "message": "Forbidden"}

A server administrator using the REST API is troubleshooting the error seen in the exhibit. What needs to be fixed in the command?

- A. add the missing authentication token to the header
- B. change http to https in the URL
- C. change the "login-sessions" string in the URL to "login-session"
- D. change the POST method to PUT

Correct Answer: D

QUESTION 5

Before applying server profiles to a group of servers, what is the first thing you should check?

- A. The servers are all the same hardware type.
- B. The servers have the correct firmware installed.
- C. The servers are powered down.

D. The servers are all Synergy compute modules.

Correct Answer: A
