**QUESTION 1**

Refer to the exhibit.

The link between Core-1 and Core-2 shown in the exhibit fails, and some users lose connectivity. What should the network administrator do to prevent this issue in a situation such as this?

- A. Configure BPDU protection on all Core-2 ports.
- B. Enable IP routing on Core-2.
- C. Create routes to 10.1.10.0/24 and 10.1.11.0/24 through 10.1.1.3 on Core-2.
- D. Extend VLANs 10 and 11 on all switch-to-switch links.

Correct Answer: D

**QUESTION 2**

Refer to the exhibits.

Exhibit 1 Exhibit 2

Core-1 spanning tree related config

```
#  
spanning-tree  
spanning-tree priority 0
```

All other switch spanning tree related config

```
#  
spanning-tree
```

A network uses RSTP, as shown in the exhibits. The network administrator wants switches to use the link that connects to Core-2 to forward some of the traffic. The administrator enters these commands on every switch shown in the exhibit:

```
Switch(config)# spanning-tree config-name myswitches  
Switch(config)# spanning-tree config-revision 1  
Switch(config)# spanning-tree instance 1 vlan 10-19  
Switch(config)# spanning-tree instance 2 vlan 20-29
```

The administrator then discovers that the links to Core-2 still did not forward any traffic. What should the administrator do to enable these links to carry traffic?

A. Activate the MSTP region configuration on all switches.

B. Lower the port cost on the links that connect to Core-2 on the access layer switches.

C. Configure Core-2 with spanning tree priority 0 in instance 2.

D. Change the spanning tree mode to MSTP on all switches.

Correct Answer: B

---

### QUESTION 3

A retail company needs a quick way to deploy network infrastructure to new sites.

Which Aruba solutions provide Zero Touch Provisioning (ZTP) for Aruba Instant APs (IAPs) and ArubaOS switches?

A. Aruba AirWave and Aruba Activate

B. Aruba Meridian and Aruba ALE

C. Aruba AirWave and Aruba Central

D. Aruba Activate and Aruba Meridian

Correct Answer: A

---

### QUESTION 4

Refer to the exhibit.

```
Switch# show spanning-tree 1, 19, 21 instance ist
```

```
<-output omitted ->
```

Port	Type	Cost	Priority	Role	State	Designated Bridge
1	100/1000T	20000	128	Designated	Forwarding	d4c9ef-851680
19	100/1000T	20000	128	Root	Forwarding	d07e28-cec94f
21	1/1000T	20000	128	Alternate	Blocking	d07e28-ced31e

This switch currently assigns all VLANs to MSTP instance 0 or the Internal Spanning Tree (IST).

Which statement correctly describes interface 21?

A. The interface is down at Layer 2; it is not available for sending or receiving any traffic.

B. The interface does not forward or accept data traffic, but it is ready to start forwarding if interface 19 fails.

C. The interface is an edge port but has received Bridge Protocol Data Units (BPDUs), so it is disabled.

D. The interface does not support spanning tree; it is possible that it will introduce a loop in the network.

Correct Answer: B

---

### QUESTION 5

A network administrator configures MSTP on an ArubaOS switch. The administrator wants to ensure that this switch is always the root for instance 1.

What should the administrator do to accomplish this?

- A. Specify priority 15 for spanning tree instance 1.
- B. Specify spanning tree cost 0 on all switch ports that connect to other switches that use instance 1.
- C. Specify priority 0 for spanning tree instance 1.
- D. Specify spanning tree cost 15 on all switch ports that connect to other switches that use instance 1.

Correct Answer: C
