QUESTION 1

Universal Containers want users to be able to log in to the Salesforce mobile app with their Active Directory password. Employees are unable to use mobile VPN.

Which two options should an identity architect recommend to meet the requirement?

Choose 2 answers

A. Active Directory Password Sync Plugin

B. Configure Cloud Provider Load Balancer

C. Salesforce Trigger and Field on Contact Object

D. Salesforce Identity Connect

Correct Answer: AD

QUESTION 2

Universal Containers (UC) has an existing e-commerce platform and is implementing a new customer community. They do not want to force customers to register on both applications due to concern over the customers experience. It is expected that 25% of the e-commerce customers will utilize the customer community . The e-commerce platform is capable of generating SAML responses and has an existing REST-ful API capable of managing users. How should UC create the identities of its e-commerce users with the customer community?

A. Use SAML JIT in the Customer Community to create users when a user tries to login to the community from the e-commerce site.

B. Use the e-commerce REST API to create users when a user self-register on the customer community and use SAML to allow SSO.

C. Use a nightly batch ETL job to sync users between the Customer Community and the e- commerce platform and use SAML to allow SSO.

D. Use the standard Salesforce API to create users in the Community When a User is Created in the e-Commerce platform and use SAML to allow SSO.

Correct Answer: A

QUESTION 3

Universal Containers wants to implement SAML SSO for their internal Salesforce users using a third-party IdP. After some evaluation, UC decides not to set up My Domain for their Salesforce org. How does that decision impact their SSO implementation?

A. SP-initiated SSO will not work.

B. Neither SP- nor IdP-initiated SSO will work.

3 / 5

C. Either SP- or IdP-initiated SSO will work.

D. IdP-initiated SSO will not work.

Correct Answer: B

QUESTION 4

An identity architect has built a native mobile application and plans to integrate it with a Salesforce Identity solution. The following are the requirements for the solution:

1.

 Users should not have to login every time they use the app.

2.

 The app should be able to make calls to the Salesforce REST API.

3.

 End users should NOT see the OAuth approval page.

How should the identity architect configure the Salesforce connected app to meet the requirements?

A. Enable the API Scope and Offline Access Scope, upload a certificate so JWT Bearer Flow can be used and then set the connected app access settings to "Admin Pre- Approved".

B. Enable the API Scope and Offline Access Scope on the connected app, and then set the connected app to access settings to \\'Admin Pre-Approved".

C. Enable the Full Access Scope and then set the connected app access settings to "Admin Pre-Approved".

D. Enable the API Scope and Offline Access Scope on the connected app, and then set the Connected App access settings to "User may self authorize".

Correct Answer: A

QUESTION 5

Universal containers (UC) built a customer Community for customers to buy products, review orders, and manage their accounts. UC has provided three different options for customers to log in to the customer Community: salesforce, Google, and Facebook. Which two role combinations are represented by the systems in the scenario? Choose 2 answers

A. Google is the service provider and Facebook is the identity provider

B. Salesforce is the service provider and Google is the identity provider

C. Facebook is the service provider and salesforce is the identity provider
