**QUESTION 1**

Northern Trail Outfitters needs to secure an integration with an external Microsoft Azure API Gateway. What integration security mechanism should be employed?

- A. Configure mutual server authentication with two-way SSL using CA issued certificates.
- B. Configure a connected app with an authorization endpoint of the API gateway and configure OAuth settings.
- C. Use an API only user profile and implement use an external identity provider with federated API access.
- D. Implement Salesforce Shield with Encryption at Rest and generate a tenant secret.

Correct Answer: A

---

**QUESTION 2**

An Enterprise Customer is planning to implement Salesforce to support case management. Below, is their current system landscape diagram. Considering Salesforce capabilities, what should the Integration Architect evaluate when integrating Salesforce with the current system landscape?

- A. Integrating Salesforce with Order Management System, Email Management System and Case Management System.
- B. Integrating Salesforce with Order Management System, Data Warehouse and Case Management System.
- C. Integrating Salesforce with Data Warehouse, Order Management and Email Management System.
- D. Integrating Salesforce with Email Management System, Order Management System and Case Management System.

Correct Answer: C

---

**QUESTION 3**

A US business-to-consumer (B2C) company is planning to expand to Latin America. They project an initial Latin American customer base of about one million, and a growth rate of around 10% every year for the next 5 years. They anticipate privacy and data protection requirements similar to those in the European Union to come into effect during this time. Their initial analysis indicates that key personal data is stored in the following systems:

1.  
Legacy mainframe systems that have remained untouched for years and are due to be decommissioned.
2.  
Salesforce Commerce Cloud Service Cloud, Marketing Cloud, and Community Cloud.
- 3.

The company's CIO tasked the integration architect with ensuring that they can completely delete their Latin American customer's personal data on demand. Which three requirements should the integration architect consider? Choose 3 answers

- A. Manual steps and procedures that may be necessary.
- B. Impact of deleted records on system functionality.
- C. Ability to delete personal data in every system.
- D. Feasibility to restore deleted records when needed.
- E. Ability to provide a 360-degree view of the customer.

Correct Answer: BCD

---

#### QUESTION 4

A company that is a leading provider of courses and training delivers courses using third party trainers. The trainer for the company has to be verified from 10 different training accreditation verification agencies before providing training for the

company. Each training accreditation agency has its own response time, which could take days to confirm a trainer.

The company decided to automate the trainer accreditation verification process by integrating to the agencies web services.

What is the recommended approach to automate this process?

- A. Use Salesforce external service to make the call out, Salesforce external service should check the verification agencies until the result is verified, then update the trainer status to "verified".
- B. Create a trigger on the trainer record to make a Callout to each verification agencies, write business logic to consolidate the verification then update the trainer status to verified".
- C. Make an apex callout using @future annotation to make the call out to all different agencies. The response should update the trainer status to "verified".
- D. Use middleware to handle the call out to the 10 different verification services, the middleware will handle the business logic of consolidating the verification result from the 10 services, then make a call-in to Salesforce and update the verification status to "verified".

Correct Answer: D

---

#### QUESTION 5

Universal Containers (UC) is currently managing a custom monolithic webservice that runs on an on-premise server. This monolithic web service is responsible for Point-to-Point (P2P) integrations between:

1.

Salesforce and a legacy billing application

2.

Salesforce and a cloud-based Enterprise Resource Planning application

3.

Salesforce and a data lake.

UC has found that the tight interdependencies between systems is causing integrations to fail.

What should an architect recommend to decouple the systems and improve performance of the integrations?

A. Re-write and optimize the current web service to be more efficient.

B. Leverage modular design by breaking up the web service into smaller pieces for a microservice architecture.

C. Use the Salesforce Bulk API when integrating back into Salesforce.

D. Move the custom monolithic web service from on-premise to a cloud provider.

Correct Answer: B
