### QUESTION 1

Northern Trail Outfitters submits orders to the manufacturing system web-service. Recently, the system has experienced outages that keepservice unavailable for several days. What solution should an architect recommend to handle errors during these types of service outages?

- A. Use middleware queuing and buffering to insulate Salesforce from system outages.
- B. A Use Platform Event replayldand custom scheduled Apex process to retrieve missed events.
- C. Use @future jobld and custom scheduled apex process to retry failed service calls.
- D. Use Outbound Messaging to automatically retry failed service calls.

Correct Answer: A

Explanation: [https://developer.salesforce.com/docs/atlas.en-us.platform\\_events.meta/platform\\_events/platform\\_events\\_api\\_considerations.htm](https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_events_api_considerations.htm)

### QUESTION 2

Northern Trail Outfitters (NTO) has hired an Integration Architect to design the integrations between existing systems and a new instance of Salesforce. NTO has the following requirements:

1.  
Initial load of 2M Accounts, 5.5M Contacts, 4.3M Opportunities, and 45k Products into the new org.
  2.  
Notification of new and updated Accounts andContacts needs to be sent to 3 external systems.
  3.  
Expose custom business logic to 5 external applications in a highly secure manner.
  4.  
Schedule nightly automated dataflows, recipes and data syncs. Which set of APIs are recommended in order to meet the requirements?
- A. Bulk API, Chatter REST API, Apex SOAP API, Tooling API
  - B. Bulk API, Chatter REST API, Apex REST API, Analytics REST API
  - C. Bulk API, Streaming API, Apex REST API, Analytics REST API
  - D. Bulk API, Streaming API, Apex SOAP API, Analytics REST API

Correct Answer: C

**QUESTION 3**

A company needs to be able to send data from Salesforce to a homegrown system behind a corporate firewall. The data needs to be pushed only one way and doesn't need to be sent in real time. The average volume is 2 million records per day.

What should an integration architect consider when choosing the right option in building the integration between the external system and Salesforce?

- A. Due to high volume of records, number of concurrent requests can hit the limit for the REST API call to external system.
- B. Due to high volume of records, a third party integration tool is required to stage records off platform.
- C. Due to high volume of records, the external system will need to use a BULK API Rest endpoint to connect to salesforce.
- D. Due to high volume of records, salesforce will need to make a REST API call to external system.

Correct Answer: B

---

**QUESTION 4**

Northern Trail Outfitters has had an increase in requests from other business units to integrate opportunity information with other systems from Salesforce. The developers have started writing asynchronous @future callouts directly into the target systems. The CIO is concerned about the viability of this approach scaling for future growth and has requested a solution recommendation.

What should be done to mitigate the concerns that the CIO has?

- A. Implement an ETL tool and perform nightly batch data loads to reduce network traffic using last modified dates on the opportunity object to extract the right records.
- B. Develop a comprehensive catalog of Apex classes to eliminate the need for redundant code and use custom metadata to hold the endpoint information for each integration.
- C. Refactor the existing @future methods to use Enhanced External Services, import Open API 2.0 schemas and update flows to use services instead of Apex.
- D. Implement an Enterprise Service Bus for service orchestration, mediation, routing and decouple dependencies across systems.

Correct Answer: C

---

**QUESTION 5**

Northern Trail Outfitters (NTO) has recently implemented middleware for orchestration of services across platforms. The ERP system being used requires transactions be captured near real time at a REST endpoint initiated in Salesforce when creating an order object. Additionally, the Salesforce team has limited development resources and requires a low code solution.

Which two options will fulfill the use case requirements? Choose 2 answers

- A. Use Remote Process Invocation fire and forget pattern on insert on the order object using Flow Builder.
- B. Implement a Workflow Rule with Outbound Messaging to send SOAP messages to the designated endpoint.
- C. Implement Change Data Capture on the order object and leverage the replay Idin the middleware solution.
- D. Use a process builder to create a Platform Event, selecting the record type as the Platform Event Name on insert of record.

Correct Answer: AC
