**QUESTION 1**

An Architect is asked to build a solution that allows a service to access Salesforce through the API. What is the first thing the Architect should do?

- A. Create a new user with SystemAdministrator profile.
- B. Authenticate the integration using existing Single Sign-On.
- C. Authenticate the integration using existing Network-BasedSecurity.
- D. Create a special user solely for the integration purposes.

Correct Answer: D

QUESTION 2

Northern Trail Outfitters requires an integration to be set up between one of their Salesforce orgs and an external data source us Salesforce Connect. The external data source supports Open Data Protocol. Which three configurations should an Integration Architect recommend be implemented in order to secure requests coming from Salesforce? Choose 3 answers

- A. Configure Identity Type for OData connection.
- B. Configure a Certificate for OData connection.
- C. Configure Special Compatibility for OData connection,
- D. Configure CSRF Protection for OData connection.
- E. Configure CSRF Protection on External Data Source.

Correct Answer: ABD

QUESTION 4

A company needs to be able to send data from Salesforce to a homegrown system behind a corporate firewall. The data needs to be pushed only one way and doesn't need to be sent in real time. The average volume is 2 million records per day.

What should an integration architect consider when choosing the right option in building the integration between the external system and Salesforce?

- A. Due to high volume of records, number of concurrent requests can hit the limit for the REST API call to external system.
- B. Due to high volume of records, a third party integration tool is required to stage records off platform.
- C. Due to high volume of records, the external system will need to use a BULK API Rest endpoint to connect to salesforce.
- D. Due to high volume of records, salesforce will need to make a REST API call to external system.

Correct Answer: B

QUESTION 5

Northern Trail Outfitters needs to use Shield Platform Encryption to encrypt social security numbers in order to meet a business requirement. Which two considerations should an Integration Architect do prior to the implementation of Shield Platform Encryption? Choose 2 answers

- A. Encrypt the data using the most current key.
- B. Review shield platform encryption configurations.
- C. Encrypt all the data so that it is secure.
- D. Use Shield Platform Encryption as a user authentication or authorization tool.

Correct Answer: AB
