1 / 5

QUESTION 1

An architect recommended using Apex code to make callouts to an external system to process insurance

quote.

What should the integration architect consider to make sure this is the right option for the integration?

A. The maximum callouts in a single Apex transaction.

B. The maximum number of parallel Apex callouts in a single continuation.

C. The limit on long-running requests (total execution time).

D. The limit of pending operations in the same transaction.

Correct Answer: D

QUESTION 2

Northern Trail Outfitters has a registration system that is used for workshops offered at its conferences. Attendees use a Salesforce community to register for workshops, but the scheduling system manages workshop availability based on room capacity. It is expected that there will be a big surge of requests for workshop reservations when the conference schedule goes live.

Which integration pattern should be used to manage the influx in registrations?

A. Remote Process Invocation-Request and Reply

B. Remote Process Invocation-Fire and Forget

C. Batch Data Synchronization

D. Remote Call-In

Correct Answer: C

QUESTION 3

UC leverages customer MDM as a source of truth. The requirement is to dedupe and store any account or contact created in MDM before the same is created in Salesforce. This ensures data is clean and not duplicated in Salesforce. During peak season, users experience a "Concurrent Request Limit Exceeded" error.

What is the recommended solution?

A. Invoke a continuation callout to MDM from a VF Page controller.

B. Invoke a continuation callout to MDM from a before insert trigger.

C. Invoke a continuation callout to MDM from a VF Page JavaScript.

3 / 5

D. Invoke a continuation callout to MDM from a VF Page @future call.

Correct Answer: A

QUESTION 4

Universal Containers sells its products online using a system built on Force.com sites. The orders are captures and processed in Salesforce. the company uses an external marketing system and would like to make use of the customer data captured in Salesforce.The marketing system has REST API that can be used to push data into it.

Which three options should a Technical Architect consider that do not require building custom web services on the marketing system?

Choose 3 answers

A. Write a custom Apex web service, Which will be called from the marketing system to retrieve customer data.

B. Use Apex callout to send customer data from Salesforce to the marketing system

C. Use a middleware tool to pull customer data from Salesforce and push it to the marketing system on adaily basis.

D. Build a custom java application using the Enterprise WSDL to pull data from Salesforce and push it to the marketing system.

E. Use outbound messages to send customer data from Salesforce to the marketing system.

Correct Answer: ABE

QUESTION 5

Northern Trail Outfitters (NTO) is looking to integrate three external systems that run nightly data enrichment processes in Salesforce. NTO has both of the following security and strict auditing requirements:

1.

The external systems must follow the principle of least privilege, and

2.

The activities of the eternal systems must be available for audit.

What should an Integration Architect recommend as a solution for these integrations?

A. A shared integration user for the three external system integrations.

B. A shared Connected App for the three external system integrations.

C. A unique integration user for each external system integration.

D. A Connected App for each external system integration.

Correct Answer: D
