**QUESTION 1**

You are working on a network design that will use EX Series devices as Layer 2 access switches in a campus environment. You must include Junos Space in your design. You want to take advantage of security features supported on the devices.

Which two security features would satisfy this requirement? (Choose two.)

- A. SDSN
- B. Stateful Firewall
- C. Access Control
- D. ALG

Correct Answer: BC

QUESTION 2

You are designing a new network for your organization with the characteristics shown below.

All traffic must pass inspection by a security device.

A center-positioned segmentation gateway must provide deep inspection of each packet using 10 Gbps interfaces.

Policy enforcement must be centrally managed.

Which security model should you choose for your network design?

- A. Intrazone Permit
- B. trust but verify
- C. user-role firewall policies
- D. Zero Trust

Correct Answer: D

QUESTION 3

You must allow applications to connect to external servers. The session has embedded IP address information to enable the remote system to establish a return session.

In your design, which function should be implemented?

- A. source NAT
- B. application layer gateway
- C. destination NAT
- D. HTTP redirect

Correct Answer: A

QUESTION 4

You are implementing Routing Engine protection, and packets are processed in a specific order. In this scenario, which function processed a received packet last?

- A. loopback interface input policer
- B. loopback interface input firewall filter
- C. physical interface input firewall filters
- D. physical interface input policer

Correct Answer: D

QUESTION 5

You are asked to deploy a security solution in your data center that ensures all traffic flows through the SRX Series devices.

Which firewall deployment method meets this requirement?

- A. one-arm
- B. two-arm
- C. transparent
- D. inline

Correct Answer: D
