Following Questions and Answers are all new published by Juniper Official Exam Center

QUESTION 1

You have been asked to provision a service provider\\'s network to accommodate Layer 3 VPNs as defined in RPC 4364. Which three tasks must be performed before the provider core is ready to carry VPN traffic? (Choose three.)

A. All P routers and PE routers must be configured to support MPLS administrative-groups (colors)

B. All PE routers must be configured to support Multiprotocol BGP (MP-BGP)

C. All P routers and PE routers must have a signaling protocol such as RSVP or LDP enabled

D. All P routers and PE routers must have a discovery protocol such as LLDP or CDP enabled

E. All P routers and PE routers must have MPLS reach ability to PE routers

Correct Answer: BCE

QUESTION 2

You have configured MPLS and RSVP in your network using all of the Junos defaults. You established an LSP in your network which is reporting an up status but no traffic is using it.

Which two statements reflect potential causes for this issue? (Choose two)

A. The LSP egress address is a physical interface address

B. family MPLS was omitted from the router configurations

C. No BGP routes are being advertised from the remote neighbor

D. The LSP egress address does not match the BGP next-hop address

Correct Answer: CD

QUESTION 3

An Ethernet bridge is configured such that all interfaces are in a single broadcast domain. Which two tasks does an Ethernet bridge perform in response to receiving a frame with an unknown unicast destination MAC address? (Choose two.)

A. It drops the frame.

B. It floods the frame out of all interfaces except the one on which is was received.

C. It learns the destination MAC address when it sees return traffic from the device.

D. It learns the source MAC address when it sees return traffic from that device.

Correct Answer: BC

When a bridge receives a data frame with an unknown destination MAC address, the frame is flooded out all other ports

in the same broadcast domain. Once the bridge sees return traffic from this MAC address, it adds the address to the bridge table.

QUESTION 4

What are two similarities between OSPF and IS-IS? (Choose two.)

A. Both use hello packets to form and maintain adjacencies.

B. Both use the Dijkstra algorithm to construct a shortest-path tree.

C. Both elect a designated router and a backup designated router.

D. Both have a built-in mechanism to provide address summarization between areas.

Correct Answer: AB

QUESTION 5

You have configured multiple IP-IP tunnels across your network to provide connectivity to remote sites. Which technique is used to help the IP endpoints in your network determine the optimal packet size to send across your tunnels?

A. path MTU discovery

B. fragmentation discovery

C. end-to-end MTU discovery

D. packet throughput discovery

Correct Answer: A
