**QUESTION 1**

An RSVP enabled router receives an RSVP reservation message for a new RSVP path. The router is unable to accommodate the reservation request.

Which action does the router take?

- A. The router sends a ResvErr message to the upstream router.
- B. The router sends a ResvErr message to the downstream router.
- C. The router sends a ResvTear message to the upstream router.
- D. The router sends a ResvTear message to the downstream router.

Correct Answer: D

---

**QUESTION 2**

You have a stub OSPF area running in your network. Your supervisor has asked you to build a virtual link across this area to connect new equipment acquired in a recent ISP acquisition. Which statement is correct about this scenario?

- A. Type 5 LSAs would be blocked in a stub area.
- B. Type 5 LSAs would carry external information across your transit area to the backbone.
- C. Type 5 LSAs would be seen only in the newly attached area.
- D. Type 5 LSAs would be converted to type 7 LSAs.

Correct Answer: A

---

**QUESTION 3**

Which two problems occur when increasing numbers of users are added to an Ethernet LAN with no switches present? (Choose two.)

- A. There is a greater chance for collisions to occur
- B. The MAC table sizes increase
- C. Some devices will not see certain traffic
- D. There is unnecessary consumption of network bandwidth

Correct Answer: AD

---

**QUESTION 4**

Which statement correctly describes the metric used for IS-IS?

- A. The IS-IS metric is calculated based on a reference bandwidth of 10 Mbps by default
- B. By default, IS-IS interface routes are assigned a metric of 10, regardless of actual link speed
- C. By default, the Junos OS sends only wide metrics to allow any single link to have a metric as high as 63
- D. For proper operation, the same metric value should be specified at both ends of an IS-IS link

Correct Answer: B

The protocol IS-IS does have an ability to use reference bandwidth to dynamically calculate link costs, but the default behavior has a value of 10 assigned to all transit interfaces.

---

### QUESTION 5

You want to configure an interface on your router to use an IPv6 global IP address.

Which three methods accomplish this task? (Choose three.)

- A. Use stateless autoconfiguration to assign only the 64 bit interface ID.
- B. Use stateful autoconfiguration to assign only the 64 bit interface ID.
- C. Use stateful autoconfiguration to assign the entire global IPv6 address.
- D. Use a statically assigned global IPv6 address.
- E. Use stateless autoconfiguration to assign the entire global IPv6 address

Correct Answer: ACD
