**QUESTION 1**

You are the owner of a small ISP and you would like to lease IVE device access to several of your customers. You own only one SA 6000. What are two reasons to create an IVS for each subscriber? (Choose two.)

- A. All VS admins can create their own roles and realms that are separate from the other virtual systems.
- B. All VS admins can be virtually separated using virtual IP addresses and VLAN tagging.
- C. All VS admins can upgrade their virtual system without affecting the other virtual systems on the device.
- D. All VS admins can troubleshoot their virtual system using tools such as TCP dump and traceroute.

Correct Answer: AB

---

**QUESTION 2**

You have just finished creating an IVS on your device. You can log in to your IVS but you cannot access any backend resources. What should you troubleshoot first?

- A. Verify that you have associated your IVS to the correct VLAN.
- B. Verify that you have allocated enough users for your IVS.
- C. Verify that you are not blocked because of an untrusted certificate on the IVS.
- D. Verify that you have associated your IVS to the correct virtual IP.

Correct Answer: A

---

**QUESTION 3**

You have created two sign-in URLs on your IVE -- one for employees and one for partners:

employees.acmegizmo.com partners.acmegizmo.com

Which two actions should you take to avoid having any receive certificate warnings when they connect to the IVE device? (Choose two.)

- A. Obtain a wildcard server certificate for \*.acmegizmo.com and install it on the IVE device.
- B. Append wildcards to the end of the sign-in URLs (employees.acmegizmo.com/\* and partners.acmegizmo.com/\*).
- C. Ensure that the IVE device's server certificate references both of the fully qualified domain names in the DN field.
- D. Load and properly configure a unique certificate on the IVE device for each of the two fully qualified domain names in the two URLs.

Correct Answer: AD

---

#### QUESTION 4

Which series of steps describes the appropriate method for upgrading an active/passive cluster?

- A. 1) upgrade master; 2) disable master; 3) reboot master; 4) enable backup; 5) upgrade backup; 6) enable backup
- B. 1) upgrade backup; 2) reboot backup; 3) upgrade master; 4) reboot master; 5) sync cluster
- C. 1) disable backup; 2) upgrade backup; 3) enable backup; 4) disable master; 5) upgrade master; 6) enable master
- D. 1) disable master; 2) upgrade master; 3) enable master; 4) disable backup; 5) join backup

Correct Answer: C

---

#### QUESTION 5

A customer wants to use an SA device to front-end its intranet and block access to its Wiki, but also provide access to sites like Google, Yahoo, and MSN. Which two settings must be configured to support this scenario? (Choose two.)

- A. Web access control policies
- B. passthrough proxy
- C. DNS
- D. selective rewrite

Correct Answer: AC
