**QUESTION 1**

You have set up Sky ATP with the SRX Series devices in your network. However, your SRX Series devices are unable to communicate with the Sky ATP cloud because the communication is being blocked by a gateway network device.

Which two actions should you take to solve the problem? (Choose two.)

- A. Open destination port 443 inbound from the Internet on the gateway network device.
- B. Open destination port 8080 outbound from the Internet on the gateway network device.
- C. Open destination port 443 outbound from the Internet on the gateway network device.
- D. Open destination port 8080 inbound from the Internet on the gateway network device.

Correct Answer: CD

QUESTION 2

You want to review AppTrack statistics to determine the characteristics of the traffic being monitored. Which operational mode command would accomplish this task on an SRX Series device?

- A. show services application-identification statistics applications
- B. show services application-identification application detail
- C. show security application-tracking counters
- D. show services security-intelligence statistics

Correct Answer: A

QUESTION 3

While reviewing the Log and Reporting portion of Security Director, you find that multiple objects reference the same address. You want to use a standardized name for all of the objects.

In this scenario, how would you create a standardized object name without searching the entire policy?

- A. Remove the duplicate objects.
- B. Merge the duplicate objects.
- C. Rename the duplicate objects.
- D. Replace the duplicate objects.

Correct Answer: B

QUESTION 4

Click the Exhibit button.

```
[edit]
user@host# show security policies from-zone internet to-zone dmz
policy dmz-poll {
    match {
        source-address any;
        destination-address any;
        application any;
    }
    then {
        permit {
            application-services {
                idp;
            }
        }
        log {
            session-close;
        }
    }
}

[edit]
user@host# show security idp
idp-policy idp-poll {
    rulebase-ips {
        rule r1 {
            match {
                attacks {
                    predefined-attack-groups "HTTP All";
                }
            }
            then {
                action {
                    ignore-connection;
                }
            }
        }
        rule r2 {
            match {
                attacks {
                    predefined-attack-groups "DNS All";
                }
            }
            then {
                action {
                    close-server;
                }
                ip-action {
                    ip-notify;
                }
            }
        }
    }
}
```

Referring to the configuration shown in the exhibit, which statement explains why traffic matching the IDP signature DNS:OVERFLOW:TOO-LONG-TCP-MSG is not being stopped by the SRX Series device?

- A. The security policy dmz-pol1 has an action of permit.
- B. The IDP policy idp-pol1 is not configured as active.
- C. The IDP rule r2 has an ip-action value of notify.
- D. The IDP rule r1 has an action of ignore-connection.

Correct Answer: B

QUESTION 5

Which two statements about the integrated user firewall feature of the Junos OS are true? (Choose two.)

- A. The maximum number of supported active directory servers is ten.
- B. IPv6 addresses are not supported.
- C. The maximum number of supported active directory servers is five.
- D. IPv6 addresses are supported.

Correct Answer: AB
