**QUESTION 1**

Which two modes are supported on Juniper ATP Cloud? (Choose two.)

- A. global mode
- B. transparent mode
- C. private mode
- D. Layer 3 mode

Correct Answer: AC

Explanation: Juniper ATP Cloud supports two main modes of operation:

Global mode: In this mode, the Juniper ATP Cloud service analyzes all files and network traffic that pass through the cloud-based service. It uses a combination of static and dynamic analysis techniques, as well as machine learning, to detect

and block malicious files, even if they are not known to traditional anti-virus software. Private mode: In this mode, the Juniper ATP Cloud service analyzes only the files and network traffic that are specifically uploaded or submitted for analysis

by the user. It uses the same analysis techniques as in global mode, but the user has more control over which files and network traffic are analyzed and can be used to analyze files that are behind the firewall.
