**QUESTION 1**

Which two types of source NAT translations are supported in this scenario? (Choose two.)

- A. translation of IPv4 hosts to IPv6 hosts with or without port address translation
- B. translation of one IPv4 subnet to one IPv6 subnet with port address translation
- C. translation of one IPv6 subnet to another IPv6 subnet without port address translation
- D. translation of one IPv6 subnet to another IPv6 subnet with port address translation

Correct Answer: AD

QUESTION 2

You are asked to deploy filter-based forwarding on your SRX Series device for incoming traffic sourced from the 10.10.100.0/24 network in this scenario, which three statements are correct? (Choose three.)

- A. You must create a forwarding-type routing instance.
- B. You must create and apply a firewall filter that matches on the source address 10.10.100.0/24 and then sends this traffic to your routing
- C. You must create and apply a firewall filter that matches on the destination address 10.10.100.0/24 and then sends this traffic to your routing instance.
- D. You must create a RIB group that adds interface routes to your routing instance.
- E. You must create a VRF-type routing instance.

Correct Answer: BCD

Explanation: In order to deploy filter-based forwarding on an SRX Series device for incoming traffic sourced from the 10.10.100.0/24 network, you must first create and apply a firewall filter that matches on the source address 10.10.100.0/24. Then, you must create a RIB group that adds interface routes to your routing instance and apply it. The filter will forward the traffic matching the source address to the routing instance. You don't need to create a forwarding-type routing instance or a VRF-type routing instance.

QUESTION 3
