You are configuring a new BGP session between router1 and router2. The session does not establish.

Referring to the exhibit, what must be done to establish this session?

- A. You must define the peer-as number on router2.
- B. You must define the autonomous- system number under the [edit routing-options] hierarchy on router1.
- C. You must specify type as external on both devices.
- D. You must specify the local-address on both devices.

Correct Answer: D

---

## QUESTION 2

Which two statements are true about 802.1X dynamic filters based on RADIUS attributes? (Choose two.)

- A. Filters can be defined on the network management system and deployed using vendor-specific attributes.
- B. Filters can be defined on the switch and deployed upon authentication.
- C. Filters can be defined on an automation framework and deployed when triggered by an authentication syslog message.
- D. Filters can be defined on the authentication server and deployed using vendor-specific attributes.

Correct Answer: BD

### QUESTION 3

Click the Exhibit button.

Switch 4 is rebooted as shown in the exhibit.

Which statement is correct in this scenario?

- A. CIST is reconverged.
- B. MSTI-1 is reconverged.
- C. CIST generates notification events.
- D. MSTI-2 is reconverged.

Correct Answer: B

### QUESTION 4

What information must you gather from the satellite device to provision a Junos Fusion Enterprise deployment on the aggregation device? (Choose two.)

- A. MAC address
- B. Serial number
- C. Software version
- D. Model number

Correct Answer: AB

---

#### QUESTION 5

You are enabling 802.1X authentication on an EX Series device. You are configuring the switch in the conference room where you will have non-employees with devices that do not support 802.1X authentication connecting to your network.

You must ensure that these users can connect to your network but are restricted to Internet access only.

What should you do to accomplish this task?

- A. You must add a RADIUS account for each user and assign them to the appropriate VLAN.
- B. You should ensure that the server-fail fallback feature is enabled and users are assigned to the appropriate VLAN.
- C. You should assign a guest VLAN to the interfaces and isolate that VLAN to Internet access only.
- D. You should configure a server-reject VLAN to the interfaces and isolate that VLAN to Internet access only.

Correct Answer: C
