**QUESTION 1**

Your firm is designing a new software driver that will employ a proprietary method of flow control for data being sent across a network medium. On which layer of the OSI model would be this flow control likely be implemented?

- A. Application
- B. Data Link
- C. Transport
- D. Media Access Control

Correct Answer: B

QUESTION 2

The ABC.com network consists of a single Active Directory domain named ABC.com.

You want to improve the security on the Windows Server domain controllers by configuring enhanced password policies and audit settings.

Which security template should you apply to the domain controllers?

- A. Setup security.inf.
- B. Hisecws.inf.
- C. DC security.inf.
- D. Securews.inf.
- E. Securedc.inf.
- F. Compatws.inf.
- G. Rootsec.inf.

Correct Answer: E

QUESTION 3

You work as the network administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The servers at the ABC.com network run Windows Server.

The ABC.com network has a Web server named ABC-SR11. During a routine monitoring you notice an increase in network traffic. Due to this you need to find out the MAC address of the workstation that initiated the transfers and the

command that was used. However, your action must not affect ABC-SR11.

What actions must you take?

- A. You must run the ipconfig/registerdns.
- B. You must use the Netmon utility.
- C. You must capture the IP traffic to ABC-SR11.
- D. You must Enable Server Message Block (SMB) signing on all the workstations.

Correct Answer: C

QUESTION 4

The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the ABC.com network run Windows Server and all client computers run Windows XP Professional.

ABC.com contains a file server named ABC-SR24. ABC-SR24 hosts the home folders for all ABC.com users.

After about a month the ABC.com users raised complaints regarding the unacceptable long time their home folder takes to open at certain times during the day.

You need to determine the reason for the poor performance. You verify that the processor and memory usage is low. You suspect the hard disk may be the cause of the bottleneck.

How would you verify that the hard disk is the problem?

- A. Use System Monitor to view the LogicalDisk and PhysicalDisk counters during a period of poor performance.
- B. Use Task Manager to view the page faults counter.
- C. Configure Auditing on the home folders.
- D. Use Network Monitor to view the amount of network traffic to and from the server.

Correct Answer: A

QUESTION 5

The ABC.com network consists of a single Active Directory domain named ABC.com. All the servers on the network run Windows Server servers and all the client computers run Windows XP.

The network contains a two node server cluster for file sharing that has been created using two Windows Server Enterprise Edition servers named ABC-SR01 and ABC-SR02. Both servers contain a single hard disk containing the system

volume. Both servers connect to a shared storage array which hosts the shared folders.

ABC-SR01 is configured as the preferred owner of the file sharing resources. To prepare your network for any disaster recovery, you decide to take regular backups using the Backup or Restore Wizard.

A Full backup of the shared folders is taken every night.

A Full backup of ABC-SR01 and ABC-SR02 is taken every Saturday night.

Incremental backups of ABC-SR01 and ABC-SR02 are taken every night. System State Data backups and Automated System Recovery (ASR) of both servers are taken every night.

During a routine monitoring check on Friday you discover that ABC-SR02 has gone offline.

How can you recover the cluster as soon as possible? (Choose all that apply.)

- A. Evict ABC-SR02 from the cluster.
- B. Restore the last full backup then restore the last incremental backup.
- C. Restore the last full backup then restore the last incremental backup and the last System State backup.
- D. Perform an ASR restore on ABC-SR02.
- E. Add ABC-SR02 back into the cluster.

Correct Answer: ADE
