QUESTION 1

The ABC.com network consists of a single Active Directory domain named ABC.com. ABC.com has its headquarters in Chicago and several branch offices at various locations throughout the country. All servers on the ABC.com network run

Windows Server.

You are in the process of configuring a VPN connection between the Chicago office and a branch office in Dallas using Windows Server computers running Routing and Remote Access (RRAS).

A ABC.com written security policy states that the requirements below must be met:

Data transmitted over the VPN must be encrypted with end to end encryption.

The VPN connection authentication should be at the computer level rather than at user level and with no credential information transmitted over the internet.

How should you configure the VPN? (Choose two.)

A. Use a PPTP connection.

B. Use EAP-TLS authentication.

C. Use a PPP connection.

D. Use MS-CHAP v2 authentication.

E. Use MS-CHAP authentication.

F. Use PAP authentication.

G. Use an L2TP/IPSec connection.

Correct Answer: BG

QUESTION 2

All the servers on the network run Windows Server server and all the client computers run Windows XP.

The network contains three domain controllers named ABC-DC1, ABC-DC2 and ABC-DC3. The System State Data of each domain controller is backed up on a nightly basis.

Recently an organizational unit (OU) has been mistakenly deleted from the AD.

What is the quickest way to restore the deleted OU?

A. Reboot the domain controller in Safe Mode then use Windows Backup.

B. Reboot the domain controller in Directory Services Restore Mode then perform an authoritative restore of the subtree where the OU was deleted using the Ntdsutil utility.

C. Reboot the domain controller in Directory Services Restore Mode then perform a non-authoritative restore of the

subtree where the OU was deleted using the Ntdsutil utility.

D. Reboot the domain controller using the Last Known Good Configuration.

E. Use Active Directory Sites and Services to force replication from another domain controller.

Correct Answer: B

QUESTION 3

You work as a network administrator for ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. There are currently 120 Web servers running Windows Server and are contained in an Organizational Unit (OU) named ABC_WebServers

ABC.com management took a decision to uABCrade all Web servers to Windows Server. You disable all services on the Web servers that are not required. After running the IIS Lockdown Wizard on a recently deployed web server, you discover that services such as NNTP that are not required are still enabled on the Web server.

How can you ensure that the services that are not required are forever disabled on the Web servers without affecting the other servers on the network? (Choose two.)

A. Set up a GPO that will change the startup type for the services to Automatic.

B. By linking the GPO to the ABC_WebServers OU.

C. Set up a GPO with the Hisecws.inf security template imported into the GPO.

D. By linking the GPO to the domain.

E. Set up a GPO in order to set the startup type of the redundant services to Disabled.

F. By linking the GPO to the Domain Controllers OU.

G. Set up a GPO in order to apply a startup script to stop the redundant services.

Correct Answer: BE

QUESTION 4

You need to create several subnets for your corporate network. Each subnet should have no more than two host addresses available per subnet. You have a subnet with the address of 136.42.255.0/24.What are the first two subnet addresses that would be created in this configuration?

A. 136.42.255.0/31, 136.42.255.4/31

B. 136.42.255.2/30, 136.42.255.4/30

C. 136.42.255.4/29, 136.42.255.8/29

D. 136.42.255.0/30, 136.42.255.4/30

Correct Answer: D

QUESTION 5

You work as the network administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The servers at the ABC.com network run Windows Server.

The ABC.com network has a Web server named ABC-SR11. During a routine monitoring you notice an increase in network traffic. Due to this you need to find out the MAC address of the workstation that initiated the transfers and the

command that was used. However, you action must not effect ABC-SR11.

What actions must you take?

A. You must run the ipconfig/registerdns.

B. You must use the Netmon utility.

C. You must capture the IP traffic to ABC-SR11.

D. You must Enable Server Message Block (SMB) signing on all the workstations.

Correct Answer: C
