**QUESTION 1**

An analyst is trying to create a pie chart showing the breakdown of the top sales by brand in an Explore. The analyst selects the Brand Name dimension and a measure for the Count of Items Sold. The analyst then selects the pie chart visualization, but sees the error "Too Many Rows: Pie charts can display a maximum of 50 rows of data."

How can the analyst resolve this error and create a pie chart that will always show the top brands by items sold?

- A. Sort the data by Count of Items Sold descending and apply a row limit of 50.
- B. Sort the data by Brand Name alphabetically and apply a row limit of 50.
- C. Apply a filter on the Count of Items Sold measure that requires the count to be greater than zero.
- D. Apply a filter on the Count of Items Sold measure that requires the count to be not NULL, sort the data by Count of Items Sold ascending, and apply a row limit of 50.

Correct Answer: C

---

**QUESTION 2**

An executive needs to receive a dashboard every morning with data for the previous day only. The dashboard currently has a date filter defined. The executive must receive only the data requested, and the dashboard data needs to remain unchanged for all other users.

What should the analyst do to meet this requirement?

- A. Filter the dashboard for the advanced value "yesterday", and create a new schedule.
- B. Edit the dashboard data filters default value to be the previous day's date, and create a new schedule.
- C. Create a new schedule and modify the filter's default value to the previous day's date.
- D. Create a new schedule and modify the schedule filter to be the advanced value "yesterday".

Correct Answer: B

---

**QUESTION 3**

An analyst needs to analyze the ecommerce quarter-over-quarter order growth. Two fields are given: Order Created Quarter and Order Count.

Which table calculation function should the analyst use to calculate the quarter-over-quarter order growth?

- A. `pivot_offset()`
- B. `lookup()`
- C. `offset_list()`
- D. `offset()`

Correct Answer: D

---

#### QUESTION 4

An analyst is building out a company KPI dashboard and creates a blank dashboard. The analyst can either create a new tile or use an existing Look.

What are two use cases for using Look-linked tile instead of building a query tile? (Choose two.)

- A. The analyst wants to use the Look-linked tile in a separate company performance dashboard.
- B. The analyst plans on creating a scheduled report of the associated Look.
- C. The analyst is considering dashboard performance, and Look-linked tiles on dashboards lead to faster performance.
- D. The analyst wants the flexibility to export the Look-linked tile results to additional file formats not supported by query tiles.

Correct Answer: AB

---

#### QUESTION 5

An analyst needs to select all users in the query results but only wants to visualize results for users that have more than 100 orders.

Which visualization option should the analyst utilize?

- A. Right-click to hide unwanted rows.
- B. Limit displayed rows.
- C. Use a custom filter.
- D. Hide rows with table calculations.

Correct Answer: B
