QUESTION 1

A custom module needs to log all calls of \Magento\Customer\Api\AddressRepositoryInterface::save().

Which mechanism do you use?

- A. An observer on the customer_address_repository_save event, which is automatically fired for every repository save
- B. A proxy configured to intercept all calls to any public method and log them
- C. An extension attribute configured in the extension_attributes.xml
- D. A plugin declared for the save() method

Correct Answer: A

QUESTION 2

You are adding a new entry to the backend menu that appears after Marketing > SEO and Search > Site Map

You see the existing site map menu item is declared by the node:

```
<add id="Magento_Sitemap::catalog_sitemap"  
    title="Site Map"  
    translate="title"  
    sortOrder="60"  
    parent="Magento_Backend::marketing_seo"  
    action="adminhtml/sitemap/"  
    resource="Magento_Sitemap::sitemap"/>
```

What two actions do you take to configure the new menu entry location? (Choose two.)

- A. Specify item XML in the file etc/adminhtml/menu/marketing/seo/menu.xml
- B. Specify parent="Magento_Sitemap::catalog_sitemap"
- C. Specify parent="Magento_Backend::marketing_seo"
- D. Specify sortOrder="100"

Correct Answer: AD

QUESTION 3

In a code review of a merchant's site you have discovered that there are multiple observers for the checkout_submit_all_after event. After closer inspection, you notice one of these observers is relying on the others being executed before it is called.

What risk does this pose, and how can it be mitigated?

- A. There is no risk posed as long as each event observer specifies a correct sortOrder. Nothing needs to be changed.
- B. Event observers are fired in alphabetical order of the observer name. There is no risk here.
- C. Magento only supports one observer per event. These observers will need to be combined into a single point of customization.
- D. Order of listener execution cannot be guaranteed, resulting in a fragile implementation. This code should be re-worked using plugins

Correct Answer: B

QUESTION 4

While developing a module you need to modify an existing Data Patch. How can you force Magento to execute an existing Data Patch file again?

- A. By removing the Data Patch, running the command: bin/magento setup:db-data:upgrade, then copying the file back and running the command again
- B. By deleting the record with the Data Patch class name from the table patch_list table
- C. By changing the version of the Data Patch in the getVersion method
- D. By modifying the data_version value in the setup_module table

Correct Answer: B

QUESTION 5

You are writing a customization for the customer module. You need to make sure the configuration files from your module are loaded after the customer module's configuration.

Where should the dependency be declared?

- A. composer.json
- B. etc/module.xml
- C. etc/config.xml
- D. etc/di.xml

Correct Answer: A
