**QUESTION 1**

You are working on a project that contains a million SKUs. The merchant has requested the product view page to have a custom color schema and page layout depending on the product price range.

How do you implement this, keeping simplicity in mind?

- A. Create a custom block which will dynamically choose the appropriate template
- B. Specify custom layout update XML in the admin panel for every product
- C. Write a Data Patch which will set the appropriate layout update XML for every product record
- D. Enable the dynamic product page UI component and configure it to use a different layout per price range

Correct Answer: D

---

**QUESTION 2**

How do you persist an entity to the database?

- A. Calling the store() method on the entity's model
- B. Calling the update() method on the entity's collection
- C. Calling the persist() method on the entity's repository
- D. Calling the save() method on the entity's repository

Correct Answer: D

---

**QUESTION 3**

What is the difference between online and offline shipping methods?

- A. Online means that a shipment will have a tracking number, and offline means no tracking numbers are available
- B. Online means Magento will use a shipping carrier's API to obtain rates, offline means Magento will calculate the rates internally
- C. Online means that an item's shipping will be processed by the merchant, offline means that it will be processed by the customer
- D. Online means that it will be sent to the customer using a shipping carrier, offline means the customer will pick up the order in person

Correct Answer: C

#### QUESTION 4

How can you access the select query of a collection?

- A. You can only access the select query after the collection has been loaded by calling the public method query()
- B. It is stored in a protected variable \$query and can only be accessed from the inside of a collection class
- C. You can get it by using public method getSelect() which returns an instance of Magento\Framework\DB \Select
- D. The select query is not available in the collection class, it will be generated by the MySQL adapter right before executing a query

Correct Answer: C

---

#### QUESTION 5

What is the connection between product attribute sets and categories?

- A. Categories have no connection to product attribute sets, and any product can be assigned to any category
- B. Each category is linked to a single product attribute set, and only products from that attribute set are allowed in the category
- C. Each category is linked to a single product attribute set, and only products from that category's set or any of its parent categories
- D. Categories can be connected to multiple product attribute sets, and only products from one of those sets are allowed in the category

Correct Answer: D
