QUESTION 1

You need to directly access the database that belongs to your Integration environment from your local environment.

How do you achieve this?

- A. Find the connection information from the env.php file and connect with your local MySQL client
- B. Collect the SSH connection details using magento-cloud ssh --pipe and connect with your local MySQL client
- C. Add the ece-tools db-expose command to your deploy hook
- D. Use the magento-cloud db:sql command

Correct Answer: C

QUESTION 2

Magento Support advises you to upgrade to the latest release of ece-tools matching the project\\'s Magento Commerce version 2.3.1.

How do you do that?

- A. Require the exact version with composer require magento/ece-tools:2.3.1-pX where X is the latest release number
- B. Clone the repository github.com/magento/ece-tools and copy the src/ folder to vendor/magento/ecetools/src
- C. Run the command composer update magento/ece-tools
- D. Run the command ece-tools self-upgrade

Correct Answer: C

QUESTION 3

You added the env:ADMIN_PASSWORD variable in the Project Web UI to change a Magento admin user\\'s password. After deployment you are unable to login using the new password.

What causes this?

- A. When you add a variable, the build stage is being skipped, because the codebase has not been changed. You must push a commit to trigger a full deploy
- B. Deploy scripts read configuration from the environment variable called \$MAGENTO_CLOUD_VARIABLES, which contains an array of variables which were set without the env: prefix
- C. Variables which are set using the Project Web UI are not available on the build phase, the admin password variable should be set in the .magento.env.yaml file

D. The sensitive option is required for env:ADMIN_PASSWORD variable

Correct Answer: C

QUESTION 4

On a project that deploys static content during the build phase, a merchant states the deploy phase is still taking too long. You consider turning off JavaScript minification to reduce the build time.

Besides reducing the build phase time, what two consequences does turning off JavaScript minification have? (Choose

- A. The deploy artifact size will be decreased because of the larger JavaScript can be symlinked
- B. Browsing the store will be slower because larger JavaScript files have to be downloaded
- C. The deploy phase will be shorter because JavaScript can be symlinked from init instead of copied
- D. The build phase will be longer because the additional pass of JavaScript merging

Correct Answer: AD

QUESTION 5

You need to install a third party extension which is provided in a tar archive. It expands to a folder structure in app/code/MyCompany/MyModule.

Which action do you take to install the extension?

- A. Use the composer package command to create a composer package and install it with composer require
- B. Use the composer-merge-plugin to enable support for extension in app/code
- C. Add it to the project in app/code and commit it to git
- D. Request composer repository credentials from the extension vendor

Correct Answer: C
