QUESTION 1

You use the master planning module for Dynamics 365 Supply Chain Management.

Planned production orders have been created.

Several sales orders are canceled in response to concerns about recent online reviews of a product.

You need to enable the appropriate action message.

Which action message should you enable?

- A. Increase
- B. Decrease
- C. Advance
- D. Postpone
- E. Derived actions

Correct Answer: B

Decrease - The system will generate action messages when production orders, purchase orders, and other receipt transactions should be decreased to prevent excess inventory levels.

Incorrect:

*

Increase - The system will generate action messages when production orders, purchase orders, and other receipt transactions should be increased to prevent shortages in inventory.

*

Advance - The system will generate action messages, as they are needed, to move orders to an earlier date. In the Advance margin field, you can specify the maximum number of days that can pass between a receipt and an issue without an advance action.

*

Postpone - The system will generate action messages, as they are needed, to move orders to a later date. In the Postpone margin field, you can specify the maximum number of days that can pass between a receipt and an issue without a postpone action.

*

Derived actions - Action messages that are created for receipt transactions will be propagated to any derived requirements, and the necessary action messages will be generated for the receipt transactions that satisfy those requirements.

**QUESTION 2**

A company uses production orders to assist with timely inventory delivery to the shop floor.

Inventory items for production orders are not being delivered from the warehouse in time for the production runs.

You need to ensure that the inventory items are available when needed.

Which option should you select?

- A. Route card
- B. Job scheduling
- C. Job card
- D. Batch job

Correct Answer: B

You can schedule a production order with operations and job scheduling.

Note: You can use job scheduling to schedule individual jobs or shop orders, and to control the manufacturing environment. Job scheduling breaks down each operation into its individual tasks or jobs. These jobs are then assigned to the

operations resources that will perform them. Job scheduling also lets you synchronize all jobs that are referenced by the selected job. You can specify a start date and time or end date and time for the job, and then run scheduling. The time

that you specify can be the start time or the end time, depending on the scheduling direction. This functionality is useful when, for example, a job can be run only on one machine at a time, or when you want to optimize the job that is run for

each resource.

Incorrect:

Not A: The time that workers spend on production jobs is recorded in the Route card journal or the Job card journal. When these journals are posted, ledger posting to a dedicated account for resources that are in progress (WIP) is processed.

This posting represents the value of the time that is spent on the production order. After the production order is registered as ended, the WIP accounts are settled.

Not C: The job card device is used by the shop floor workers to register their daily work, such as when jobs are started, reporting feedback on jobs, registering indirect activities, and reporting absence. These registrations are the basis for

tracking progress and cost on production orders and for calculating the basis for the workers' pay.

Not D: A batch job is a group of tasks that are submitted to an Application Object Server (AOS) instance for automatic processing

QUESTION 3

HOTSPOT

A customer produces light projection toys for holiday decorations throughout the year. Because holidays vary by region and time of year, the company wants to implement Lean manufacturing.

The production process creates the toys at the following work cell: stands, main assembly, electric, visuals, and packaging.

You need to implement the production process.

Which configuration options should you use? To answer, select the appropriate configuration options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Configuration option

Each work cell must implement a lean replenishment strategy.

	▼
production flow	
vendor workflow	
customer workflow	
purchase requisition workflow	

The process must move products from one work cell to another.

	▼
transfer activity	
process activity	
service order activity	
activity diagram	

The process must include the assembly of components from previous work cells to add value.

	▼
process activity	
transfer activity	
service order activity	
activity diagram	

The process must provide the ability to improve the overall process by tracking the takt time.

	▼
production flow version	
production flow	
vendor workflow	
customer workflow	

Correct Answer:

customer workflow	

QUESTION 4

A manufacturing company uses time and attendance in Dynamics 365 Supply Chain Management.

The company requires that employees register time against each machine on the shop floor.

You need to configure the system so that employees can register time.

Which two configurations must be set up? Each answer represents a partial solution.

NOTE: Each correct selection is worth one point.

- A. electronic timecard parameter
- B. registration workflow
- C. machines as a resource
- D. time registration workers

Correct Answer: CD

Reference:

<https://docs.microsoft.com/en-us/dynamics365/supply-chain/production-control/time-attendance-registrations>

QUESTION 5

You need to resolve the issue for UserC.

Which two options should you configure? Each correct answer presents a complete solution.

- A. Forward tracing
- B. Best advice period in days
- C. Best before period in days
- D. Backward tracing
- E. Shelf life period in days

Correct Answer: CE

Scenario:

*

UserC learns that mixes containing BaseA have been stamped with a batch date from the flour vendor and is not being calculated from the mix manufacturing date. The mixes from the past month that might be impacted need to be identified and the calculation needs to be corrected.

*

BaseA and BaseB are made in large batches and stored until they are used in the other mixes.

*

Mixes with BaseA have a shelf life of six months due to the type of flour it uses.

You can reset shelf life dates for an inventory batch.

Use this procedure to reset the shelf life date for an inventory batch. The shelf life defines the effective period of a product as measured in days, months, or years. Reports and picking strategies for products are determined based on the shelf

life of a particular lot by using FIFO (First In, First Out) rules.

Click Inventory management > Inquiries > Dimensions > Batches.

Select the inventory batch to update.

Click Reset shelf life dates.

In the Reset shelf life dates form, select a new date in the date field that you want to change.

Manufacturing date

Shelf advice date Select the recommended date when a batch or lot should be retested to validate that it still meets testing standards.

Best before date Select the date before an inventory batch is best used. If you change the best before date, you are asked whether to recalculate the expiration date.

Note: In the Shelf life period in days field, enter the number of days that are added to the batch date of the item to determine the expiration date of the item.
