QUESTION 1

You need to set the code permission of an action menu item. Which property should you use?

- A. Linked Permission Object
- B. Configuration Key
- C. Needed Access Level
- D. Web Secure Transaction

Correct Answer: A

Create a Menu Item Linked to a Code Permission You can create a menu item by following these steps:

1.
Create the menu item TestMenuItem in the CodePermissionsProject project.
2.
In the Properties window for the TestMenuItem menu item, set the properties to the values that are shown in the following table.

Property	Value
Label	Code Permissions Test
ObjectType	Class
Object	TestClass
LinkedPermissionType	CodePermission
LinkedPermissionObject	TestCodePermission

Reference: Walkthrough: Creating a Code Permission under AOT Security [AX 2012]

QUESTION 2

You need to add a duty to the Accounts receivable manager role.

What are two possible menus or nodes that can be used to achieve this goal? Each correct answer presents a complete solution.

- A. The Setup menu from Organization administration

- B. The Setup menu from Accounts receivable
- C. The Security node in the Application Object Tree (AOT)
- D. The Setup menu from the System administration module

Correct Answer: CD

C: You can view and edit roles in the Security > Roles node in the AOT. You can right-click the Roles node to add a new role, and drag-and-drop duties from the Security > Duties node to add duties to a role.

D: To create or modify a security privilege or duty

Click System administration > Setup > Security > Security privileges.

Reference: Create or modify a security privilege, duty, or process cycle [AX 2012]

QUESTION 3

You need to store the preferred method of correspondence in a table named Dir Person Table. The solution must meet the following requirements:

The table must have a field that stores the preferred method of correspondence.

The field must have values of Mail, E-mail, or Unknown.

The text representing the preferred method of correspondence values on forms must be localized to the language used by the user.

The values in the database must not be localized.

How should you create the field in Dir Person Table?

- A. Create an extended data type (EDT) used to store the preferred method of correspondence. The EDT must extend from the string. Use the EDT to create the field in Dir Person Table.
- B. Create an enum that stores the preferred method of correspondence and has the values of Mail, E- mail, and Unknown. Use this enum to create the field in Dir Person Table.
- C. Create a string field that stores the preferred method of correspondence.
- D. Create an integer field that stores the preferred method of correspondence.

Correct Answer: A

EDT can be used for localization.

Both EDT and base enums can be used as extension for a field. So why to create an EDT for a base enum? This is because, Only EDTs can be used when adding a field to dialog. If a field used in a dialog is of the type enum like NoYes, even then the extended data type NoYesId extending the base enum NoYes must be used.

QUESTION 4

You create a privilege to maintain vendor information.

To which two elements can you add the privilege? Each correct answer presents a complete solution.

- A. Policies
- B. Process Cycles
- C. Duties
- D. Roles
- E. Permissions

Correct Answer: BC

B: To add an existing duty or privilege to a process cycle, right-click the duty or privilege in the left pane, and then click Copy. Right-click the process cycle, and then click Paste.

C: To add an existing privilege to a duty, right-click the privilege in the left pane, and then click Copy. Right-click the duty, and then click Paste.

Reference: Create or modify a security privilege, duty, or process cycle [AX 2012]

QUESTION 5

You work in a shared development environment. You frequently use private projects. Which statement accurately describes the private projects?

- A. Changes made to the objects in the private projects are visible only to the user who creates the projects.
- B. Private projects can have only one version in source control.
- C. Other users can be granted access to the private projects by using security roles.
- D. Private projects are visible only to the user who creates the projects.

Correct Answer: D

A project is either private or shared. Private projects are only available to the user who created them. Shared projects are available to all users and can be used as a tool for work groups to manage their work. Reference: MorphX Development Projects [AX 2012]
