**QUESTION 1**

You have a Microsoft 365 subscription.

Your company purchases a new financial application named App1.

From Cloud Discovery in Microsoft Cloud App Security, you view the Discovered apps page and discover that many applications have a low score because they are missing information about domain registration and consumer popularity.

You need to prevent the missing information from affecting the score.

What should you configure from the Cloud Discover settings?

- A. App tags
- B. Score metrics
- C. Organization details
- D. Default behavior

Correct Answer: B

An app's score in Cloud Discovery is based on categories such as General, Security, Compliance and Legal. Each category has several parameters. For example, the domain registration and consumer popularity parameters are part of the General category. These parameters are known as Score Metrics.

You can modify the default weights given to the Cloud Discovery score configuration. By default, all the various parameters evaluated are given an equal weight. If there are certain parameters that are more or less important to your organization, you can adjust the weight of each score metric.

In this case, we need to lower the weight of the domain registration and consumer popularity score metrics.

**QUESTION 2**

Your network contains an Active Directory domain named contoso.com. The domain contains five domain controllers.

You purchase Microsoft 365 and plan to implement several Microsoft 365 services.

You need to identify an authentication strategy for the planned Microsoft 365 deployment. The solution must meet the following requirements:

1.

Ensure that users can access Microsoft 365 by using their on-premises credentials.

2.

Use the existing server infrastructure only.

3.

Store all user passwords on-premises only.

4.

Be highly available.

Which authentication strategy should you identify?

A. pass-through authentication and seamless SSO

B. pass-through authentication and seamless SSO with password hash synchronization

C. password hash synchronization and seamless SSO

D. federation

Correct Answer: A

Azure AD Pass-through Authentication. Provides a simple password validation for Azure AD authentication services by using a software agent that runs on one or more on-premises servers. The servers validate the users directly with your on-premises Active Directory, which ensures that the password validation doesn't happen in the cloud.

Incorrect Answers:

B: Password hash synchronization replicates passwords to Azure Active Directory. This does not meet the following requirement: Store all user passwords on-premises only

C: Password hash synchronization replicates passwords to Azure Active Directory. This does not meet the following requirement: Store all user passwords on-premises only

D: Federation requires additional servers running Active Directory Federation Services. This does not meet the following requirement: Use the existing server infrastructure only.

---

### QUESTION 3

Your company recently purchased a Microsoft 365 subscription.

You enable Microsoft Azure Multi-Factor Authentication (MFA) for all 500 users in the Azure Active Directory (Azure AD) tenant.

You need to generate a report that lists all the users who completed the Azure MFA registration process.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

A. From Azure Cloud Shell, run the Get-AzureADUser cmdlet.

B. From Azure Cloud Shell, run the Get-MsolUser cmdlet.

C. From the Azure Active Directory admin center, use the Usage and insights blade.

D. From the Azure Active Directory admin center, use the Risky sign-ins blade.

Correct Answer: B

You can use the Get-MsolUser cmdlet to generate a report that lists all the users who completed the Azure MFA registration process. The full command would look like this:

```
Get-MsolUser -All | Where-Object {$_.StrongAuthenticationMethods.Count -eq 0} | Select-Object -Property UserPrincipalName
```

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-reporting>

---

#### QUESTION 4

Your company has offices in several cities and 100,000 users.

The network contains an Active Directory domain named contoso.com.

You purchase Microsoft 365 and plan to deploy several Microsoft 365 services.

You are evaluating the implementation of pass-through authentication and seamless SSO. Azure AD Connect will NOT be in staging mode.

You need to identify the redundancy limits for the planned implementation.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

### Answer Area

Maximum number of servers on which you can run Azure AD Connect:

▼
1
2
4
6
11

Maximum number of servers on which you can run standalone Authentication Agents:

▼
1
2
4
6
11

Correct Answer:

### Answer Area

Maximum number of servers on which you can run Azure AD Connect:

▼
1
2
4
6
11

Maximum number of servers on which you can run standalone Authentication Agents:

▼
1
2
4
6
11

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for

redundancy but the additional installation would need to be in Staging mode. An Azure AD connect installation in Staging mode is

configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

Azure authentication agents can be installed on as many servers as you like.

## QUESTION 5

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.

You sign up for Microsoft Store for Business.

The tenant contains the users shown in the following table.

Name	Microsoft Store for Business role	Azure AD role
User1	Purchaser	None
User2	Basic Purchaser	None
User3	None	Application administrator
User4	None	Cloud application administrator
User5	None	None

Microsoft Store for Business has the following Shopping behavior settings:

1.

Allow users to shop is set to On.

2.

Make everyone a Basic Purchaser is set to Off.

You need to identify which users can install apps from the Microsoft for Business private store.

Which users should you identify?

A. A. user1, User2, User3, User4, and User5

B. User1 only

C. User1 and User2 only

D. User3 and User4 only

E. User1, User2, User3, and User4 only

Correct Answer: C

Allow users to shop controls the shopping experience in Microsoft Store for Education. When this setting is on, Purchasers and Basic Purchasers can purchase products and services from Microsoft Store for Education.
