**QUESTION 1****HOTSPOT**

Your company has a hybrid deployment of Microsoft 365.

An on-premises user named User1 is synced to Microsoft Azure Active Directory (Azure AD).

Azure AD Connect is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Hot Area:

**Answer Area**

User1 [answer choice].

- cannot change her password from any Microsoft portals
- can change her password by using self-service password reset feature only
- an change her password from the Office 365 admin center only

If the password for User1 is changed in Active Directory, [answer choice].

- the password will be synchronized to Azure AD
- a new randomly generated password will be assigned to User1
- the password in Azure AD will be unchanged

Correct Answer:

**Answer Area**

User1 [answer choice].

- cannot change her password from any Microsoft portals
- can change her password by using self-service password reset feature only
- an change her password from the Office 365 admin center only

If the password for User1 is changed in Active Directory, [answer choice].

- the password will be synchronized to Azure AD
- a new randomly generated password will be assigned to User1
- the password in Azure AD will be unchanged

User1 cannot change her password from any Microsoft portals because Password Writeback is disabled in the Azure AD Connect configuration.

If the password for User1 is changed in Active Directory, the password will be synchronized to Azure AD because Password Synchronization is enabled in the Azure AD Connect configuration.

**QUESTION 2**

You have a Microsoft 365 E5 subscription that uses Endpoint security.

You need to create a group and assign the Endpoint Security Manager role to the group,

Which type of group can you use?

- A. Microsoft 365 only
- B. distribution, mail-enabled security. Microsoft 365 and security
- C. security only
- D. mail-enabled security and security only
- E. mail-enabled security, Microsoft 365. and security only

Correct Answer: E

To assign a role to a group, you must create a new security or Microsoft 365 group with the `isAssignableToRole` property set to true. <https://learn.microsoft.com/en-us/azure/active-directory/roles/groups-concept#how-role-assignments-to-groups-work>

---

**QUESTION 3**

Your on-premises network contains a Microsoft Exchange Server 2019 organization.

You purchase a Microsoft 365 E5 subscription.

You need to integrate the on-premises network and Exchange Online.

What should you do first?

- A. implement Azure AD Connect.
- B. Add a connector in Exchange Online.
- C. Run the Hybrid Configuration wizard
- D. install an Azure Active Directory (Azure AD) Application Proxy connector.

Correct Answer: A

---

#### QUESTION 4

##### HOTSPOT

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains five domain controllers.

Your company purchases Microsoft 365 and creates a Microsoft Azure Directory (Azure AD) tenant named contoso.onmicrosoft.com.

You plan to establish federation authentication between on-premises Active Directory and the Azure AD tenant by using Active Directory Federation Services (AD FS).

You need to establish the federation.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

##### Answer Area

Action to perform before establishing the federation:

▼
From the Azure portal, add a custom domain name.
From the Azure portal, configure an authentication method.
From a domain controller, install a Pass-through Authentication Agent.
From a domain controller, install Windows Identity Foundation 3.5.

Tool to use to establish the federation:

▼
Active Directory Domains and Trusts
Azure AD Connect
The AD FS console
The Azure portal

Correct Answer:

**Answer Area**

Action to perform before establishing the federation:

From the Azure portal, add a custom domain name.
From the Azure portal, configure an authentication method.
From a domain controller, install a Pass-through Authentication Agent.
From a domain controller, install Windows Identity Foundation 3.5.

Tool to use to establish the federation:

Active Directory Domains and Trusts
Azure AD Connect
The AD FS console
The Azure portal

The on-premises Active Directory domain is named contoso.com. Before you can configure federation authentication between on-premises Active Directory and the Azure AD tenant, you need to add the domain contoso.com to Microsoft 365.

You do this by adding a custom domain name.

The next step is to establish the federation. You can configure AD FS by using Azure AD Connect.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom#configuring-federation-with-ad-fs>

**QUESTION 5**

You have a Microsoft 365 subscription that uses an Azure Directory (Azure AD) tenant named Contoso.com. The tenant contains the users shown in the following table.

Name	Role
User1	Exchange administrator
User2	User administrator
User3	Global administrator
User4	None

You add another user named user5 to the User administrator role.

You need to identify which management tasks User5 can perform.

Which two tasks should you identify? Each correct answer presents a complete solution.

- A. Reset the password of any user in Azure AD.
- B. Delete any user in Azure AD.
- C. Reset the password of User2 and User4 only.
- D. Reset the password of User4 only.

E. Delete User1, User2, and User4 only.

F. Delete User2 and User4 only.

Correct Answer: CF

Users with the User Administrator role can create users and manage all aspects of users with some restrictions (see below). Only on users who are non-admins or in any of the following limited admin roles:

1.

Directory Readers

2.

Guest Inviter

3.

Helpdesk Administrator

4.

Message Center Reader

5.

Reports Reader

6.

User Administrator
