QUESTION 1

What correctly characterizes unit tests of Mule applications?

- A. They test the validity of input and output of source and target systems.
- B. They must be run in a unit testing environment with dedicated Mule runtimes for the environment.
- C. They must be triggered by an external client tool or event source.
- D. They are typically written using MUnit to run in an embedded Mule runtime that does not require external connectivity.

Correct Answer: B

QUESTION 2

The implementation of a Process API must change.

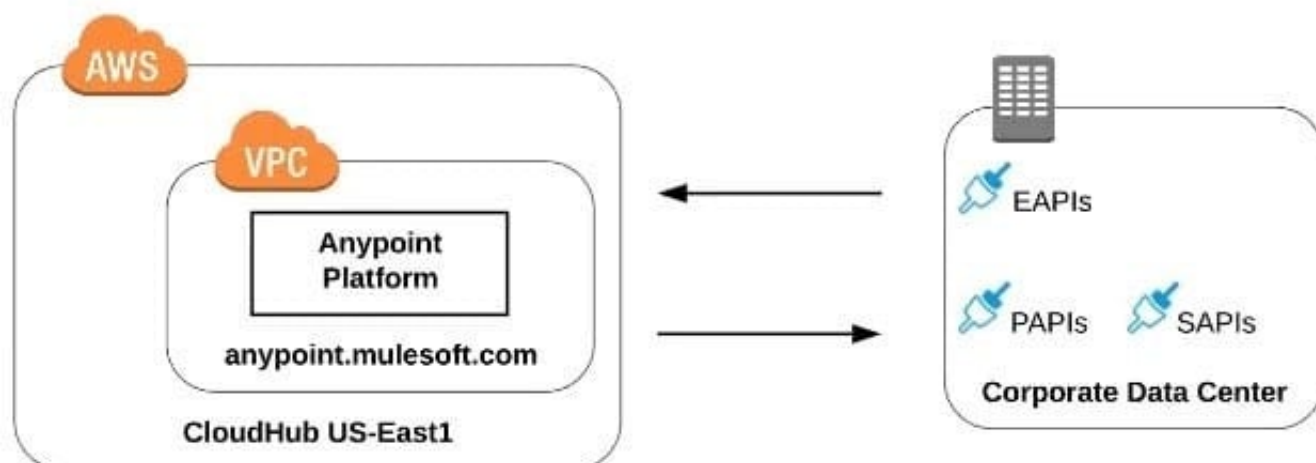

What is a valid approach that minimizes the impact of this change on API clients?

- A. Update the RAML definition of the current Process API and notify API client developers by sending them links to the updated RAML definition.
- B. Postpone changes until API consumers acknowledge they are ready to migrate to a new Process API or API version.
- C. Implement required changes to the Process API implementation so that, whenever possible, the Process API's RAML definition remains unchanged.
- D. Implement the Process API changes in a new API implementation, and have the old API implementation return an HTTP status code 301 - Moved Permanently to inform API clients they should be calling the new API implementation.

Correct Answer: A

QUESTION 3

Refer to the exhibit.

What is true when using customer-hosted Mule runtimes with the MuleSoft-hosted Anypoint Platform control plane (hybrid deployment)?

- A. Anypoint Runtime Manager initiates a network connection to a Mule runtime in order to deploy Mule applications.
- B. The MuleSoft-hosted Shared Load Balancer can be used to load balance API invocations to the Mule runtimes.
- C. API implementations can run successfully in customer-hosted Mule runtimes, even when they are unable to communicate with the control plane.
- D. Anypoint Runtime Manager automatically ensures HA in the control plane by creating a new Mule runtime instance in case of a node failure.

Correct Answer: A

QUESTION 4

When using CloudHub with the Shared Load Balancer, what is managed EXCLUSIVELY by the API implementation (the Mule application) and NOT by Anypoint Platform?

- A. The assignment of each HTTP request to a particular CloudHub worker
- B. The logging configuration that enables log entries to be visible in Runtime Manager
- C. The SSL certificates used by the API implementation to expose HTTPS endpoints
- D. The number of DNS entries allocated to the API implementation

Correct Answer: A

QUESTION 5

An API implementation is updated. When must the RAML definition of the API also be updated?

- A. When the API implementation changes the structure of the request or response messages.

- B. When the API implementation changes from interacting with a legacy backend system deployed on-premises to a modern, cloud-based (SaaS) system.
- C. When the API implementation is migrated from an older to a newer version of the Mule runtime.
- D. When the API implementation is optimized to improve its average response time.

Correct Answer: D
