QUESTION 1

Refer to the exhibit.

A RAML definition has been proposed for a new Promotions Process API, and has been published to Anypoint Exchange.

The Marketing Department, who will be an important consumer of the Promotions API, has important requirements and expectations that must be met.

What is the most effective way to use Anypoint Platform features to involve the Marketing Department in this early API design phase?

- A. Ask the Marketing Department to interact with a mocking implementation of the API using the automatically generated API Console.

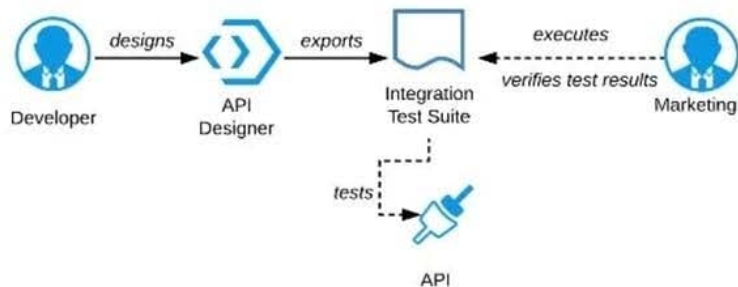

- B. Organize a design workshop with the DBAs of the Marketing Department in which the database schema of the Marketing IT systems is translated into RAML.

- C. Use Anypoint Studio to implement the API as a Mule application, then deploy that API implementation to CloudHub and ask the Marketing Department to interact with it.

- D. Export an integration test suite from API designer and have the Marketing Department execute the tests in that suite to ensure they pass.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A

QUESTION 2

An organization is deploying their new implementation of the OrderStatus System API to multiple workers in CloudHub. This API fronts the organization's on-premises Order Management System, which is accessed by the API implementation over an IPsec tunnel.

What type of error typically does NOT result in a service outage of the OrderStatus System API?

A. A CloudHub worker fails with an out-of-memory exception.

B. API Manager has an extended outage during the initial deployment of the API implementation.

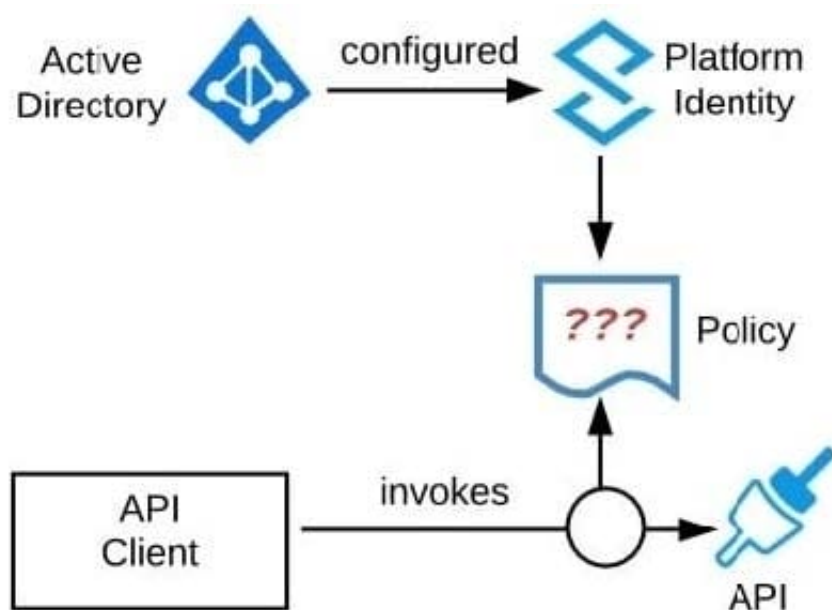

C. The AWS region goes offline with a major network failure to the relevant AWS data centers.

D. The Order Management System is inaccessible due to a network outage in the organization's on-premises data center.

Correct Answer: A

QUESTION 3

Refer to the exhibit.

An organization is running a Mule standalone runtime and has configured Active Directory as the Anypoint Platform external Identity Provider. The organization does not have budget for other system components.

What policy should be applied to all instances of APIs in the organization to most effectively restrict access to a specific group of internal users?

A. Apply a basic authentication - LDAP policy; the internal Active Directory will be configured as the LDAP source for authenticating users.

B. Apply a client ID enforcement policy; the specific group of users will configure their client applications to use their specific client credentials.

C. Apply an IP whitelist policy; only the specific users' workstations will be in the whitelist.

D. Apply an OAuth 2.0 access token enforcement policy; the internal Active Directory will be configured as the OAuth server.

Correct Answer: A

QUESTION 4

What is a key performance indicator (KPI) that measures the success of a typical C4E that is immediately apparent in responses from the Anypoint Platform APIs?

- A. The number of production outage incidents reported in the last 24 hours
- B. The number of API implementations that have a publicly accessible HTTP endpoint and are being managed by Anypoint Platform
- C. The fraction of API implementations deployed manually relative to those deployed using a CI/CD tool
- D. The number of API specifications in RAML or OAS format published to Anypoint Exchange

Correct Answer: B

QUESTION 5

An API implementation is updated. When must the RAML definition of the API also be updated?

- A. When the API implementation changes the structure of the request or response messages.
- B. When the API implementation changes from interacting with a legacy backend system deployed on-premises to a modern, cloud-based (SaaS) system.
- C. When the API implementation is migrated from an older to a newer version of the Mule runtime.
- D. When the API implementation is optimized to improve its average response time.

Correct Answer: D
