QUESTION 1

Mule applications that implement a number of REST APIs are deployed to their own subnet that is inaccessible from outside the organization.

External business-partners need to access these APIs, which are only allowed to be invoked from a separate subnet dedicated to partners - called Partner-subnet. This subnet is accessible from the public internet, which allows these external partners to reach it.

Anypoint Platform and Mule runtimes are already deployed in Partner-subnet. These Mule runtimes can already access the APIs.

What is the most resource-efficient solution to comply with these requirements, while having the least impact on other applications that are currently using the APIs?

A. Implement (or generate) an API proxy Mule application for each of the APIs, then deploy the API proxies to the Mule runtimes.

B. Redeploy the API implementations to the same servers running the Mule runtimes.

C. Add an additional endpoint to each API for partner-enablement consumption.

D. Duplicate the APIs as Mule applications, then deploy them to the Mule runtimes.

Correct Answer: A

QUESTION 2

An organization is deploying their new implementation of the OrderStatus System API to multiple workers in CloudHub. This API fronts the organization\\\'s on-premises Order Management System, which is accessed by the API implementation over an IPsec tunnel.

What type of error typically does NOT result in a service outage of the OrderStatus System API?

A. A CloudHub worker fails with an out-of-memory exception.

B. API Manager has an extended outage during the initial deployment of the API implementation.

C. The AWS region goes offline with a major network failure to the relevant AWS data centers.

D. The Order Management System is inaccessible due to a network outage in the organization\\\'s on-premises data center.

Correct Answer: A

QUESTION 3

In an organization, the InfoSec team is investigating Anypoint Platform related data traffic.

From where does most of the data available to Anypoint Platform for monitoring and alerting originate?

A. From the Mule runtime or the API implementation, depending on the deployment model

B. From various components of Anypoint Platform, such as the Shared Load Balancer, VPC, and Mule runtimes

C. From the Mule runtime or the API Manager, depending on the type of data

D. From the Mule runtime irrespective of the deployment model

Correct Answer: B

QUESTION 4

An API implementation is updated. When must the RAML definition of the API also be updated?

A. When the API implementation changes the structure of the request or response messages.

B. When the API implementation changes from interacting with a legacy backend system deployed on-premises to a modern, cloud-based (SaaS) system.

C. When the API implementation is migrated from an older to a newer version of the Mule runtime.

D. When the API implementation is optimized to improve its average response time.

Correct Answer: D

QUESTION 5

An organization is implementing a Quote of the Day API that caches today\\'s quote.

What scenario can use the CloudHub Object Store via the Object Store connector to persist the cache\\'s state?

A. When there are three CloudHub deployments of the API implementation to three separate CloudHub regions that must share the cache state.

B. When there are two CloudHub deployments of the API implementation by two Anypoint Platform business groups to the same CloudHub region that must share the cache state.

C. When there is one deployment of the API implementation to CloudHub and another deployment to a customer-hosted Mule runtime that must share the cache state.

D. When there is one CloudHub deployment of the API implementation to three CloudHub workers that must share the cache state.

Correct Answer: C
