Following Questions and Answers are all new published by Mulesoft Official Exam Center

QUESTION 1

What is true about the technology architecture of Anypoint VPCs?

A. The private IP address range of an Anypoint VPC is automatically chosen by CloudHub.

B. Traffic between Mule applications deployed to an Anypoint VPC and on-premises systems can stay within a private network.

C. Each CloudHub environment requires a separate Anypoint VPC.

D. VPC peering can be used to link the underlying AWS VPC to an on-premises (non AWS) private network.

Correct Answer: B

QUESTION 2

What is a typical result of using a fine-grained rather than a coarse-grained API deployment model to implement a given business process?

A. A decrease in the number of connections within the application network supporting the business process.

B. A higher number of discoverable API-related assets in the application network.

C. A better response time for the end user as a result of the APIs being smaller in scope and complexity.

D. An overall lower usage of resources because each fine-grained API consumes less resources.

Correct Answer: C

QUESTION 3

What should be ensured before sharing an API through a public Anypoint Exchange portal?

A. The visibility level of the API instances of that API that need to be publicly accessible should be set to public visibility.

B. The users needing access to the API should be added to the appropriate role in Anypoint Platform.

C. The API should be functional with at least an initial implementation deployed and accessible for users to interact with.

D. The API should be secured using one of the supported authentication/authorization mechanisms to ensure that data is not compromised.

Correct Answer: A

Reference: https://docs.mulesoft.com/exchange/to-share-api-asset-to-portal

QUESTION 4

An API implementation is updated. When must the RAML definition of the API also be updated?

A. When the API implementation changes the structure of the request or response messages.

B. When the API implementation changes from interacting with a legacy backend system deployed on-premises to a modern, cloud-based (SaaS) system.

C. When the API implementation is migrated from an older to a newer version of the Mule runtime.

D. When the API implementation is optimized to improve its average response time.

Correct Answer: D

QUESTION 5

What is true about where an API policy is defined in Anypoint Platform and how it is then applied to API instances?

A. The API policy is defined in Runtime Manager as part of the API deployment to a Mule runtime, and then ONLY applied to the specific API instance.

B. The API policy is defined in API Manager for a specific API instance, and then ONLY applied to the specific API instance.

C. The API policy is defined in API Manager and then automatically applied to ALL API instances.

D. The API policy is defined in API Manager, and then applied to ALL API instances in the specified environment.

Correct Answer: B
