**QUESTION 1**

All of the following clients are in need of an emergency assessment except _____.

- A. a bleeding client who has an injury from falling debris
- B. an unresponsive client
- C. a client with an old injury
- D. a pregnant woman with imminent delivery

Correct Answer: C

The client with an old injury does not need an emergency assessment because this is not a life-threatening or new situation or condition.

QUESTION 2

A nurse is working in a patient's room who is positive for C. Diff (clostridium difficile).

What is the best action for the nurse to take?

- A. Don a mask, gown, and gloves when working with this patient.
- B. Wear gloves and gown during patient care.
- C. Wear gloves when having any physical contact with the patient.
- D. Wear gloves and a mask when cleaning the patient.

Correct Answer: B

QUESTION 3

A high school nurse observes a 14-year-old female rubbing her scalp excessively in the gym. The most appropriate course of action for the nurse to do is _____.

- A. Request a private evaluation of the female's scalp from her parents.
- B. Contact the female's parents about the observations.
- C. Observe the hairline and scalp for possible signs of lice.
- D. Contact the student's physician.

Correct Answer: C

Observation of the student's hair is the next step.

**QUESTION 4**

A 60-year-old widower is hospitalized after complaining of difficulty sleeping, extreme apprehension, shortness of breath, and a sense of impending doom.

What is the best response by the nurse?

- A. "You have nothing to worry about. You are in a safe place. Try to relax."
- B. "Has anything happened recently or in the past that might have triggered these feelings?"
- C. "We have given you a medication that helps to decrease feelings of anxiety."
- D. "Take some deep breaths and try to calm down."

Correct Answer: B

Choice "Has anything happened recently or in the past that might have triggered these feelings?" provides support, reassurance, and an opportunity to gain insight into the cause of the anxiety. Choice "You have nothing to worry about. You are in a safe place. Try to relax." dismisses the client's feelings and offers false reassurance. Choices "We have given you a medication that helps to decrease feelings of anxiety." and "Take some deep breaths and try to calm down." do not allow the client to discuss his feelings, which he must do in order to understand and resolve the cause of his anxiety.

QUESTION 5

Which of these is not an early indicator of increased intracranial pressure?

- A. widening pulse pressure
- B. Cushing's reflex
- C. Cheyne-Stokes respirations
- D. decorticate posture

Correct Answer: B
