**QUESTION 1**

The customer is seeing high memory utilization on a mission critical VM. Users report that the application is unavailable. The guest OS does not support hot add components.

How should the administrator fix this issue?

- A. Go to Control Panel in the VM: Select the Computer Properties Increase the amount of RAM assigned
- B. From the Prism web console: Go to the VM dashboard Select the VM from the VMs list Choose Update Adjust the amount of memory assigned to the VM
- C. During the next maintenance window: Select the VM from the VMs list Perform a graceful shutdown Choose Update Increase the amount of memory assigned to the VM
- D. Access the CVM on the host that is running the VM: Open acli Run a command to increase the amount of RAM assigned to the VM

Correct Answer: C

QUESTION 2

An administrator wants to create a trunked interface on a VM on AOS 5.10.x. Which two steps should the administrator take first to achieve this? (Choose two.)

- A. SSH to CVM
- B. Update VM dialog
- C. Use acli
- D. Log in over PE web UI

Correct Answer: CD
