QUESTION 1

A customer is using SnapMirror to replicate their data to a remote site. They notice that storage efficiency is not preserved, and the amount of data at the destination is higher than expected. In this scenario, which configuration in the destination volume would cause this issue?

- A. Post process deduplication is enabled on the destination.
- B. The volumes are not thin-provisioned on the destination.
- C. Post process compression is enabled on the destination.
- D. There is an existing FlexClone volume on the destination.

Correct Answer: D

QUESTION 2

Click the Exhibit button.

The screenshot shows the OnCommand Unified Manager interface. On the left is a navigation sidebar with icons for filters, volume status, state, and tiering policy. The main area displays a table of volumes under the heading 'Health / Volumes'. The table has columns for Volume, State, Junction Path, Protection Role, and Storage Virtual Machine (svm). The 'engineering' volume is selected, showing it is in an 'Online' state with a junction path of '/engineering' and a protection role of 'Unprotected'. Other volumes include 'svm4_finance_mirror', 'svm4_sales_west_mirror', 'support', 'svm8_root', 'svm2_oraarch1_mirror', and 'svm2_oradb1_mirror'.

Volume	State	Junction Path	Protection Role	Storage Virtual Machine
svm4_finance_mirror	Online		Destination	svm8
svm4_sales_west_mirror	Online		Destination	svm6
support	Online	/support	Protected	svm8
svm8_root	Online	/	Unprotected	svm8
engineering	Online	/engineering	Unprotected	svm8
svm2_oraarch1_mirror	Online		Destination	svm6
svm2_oradb1_mirror	Online		Destination	svm6

You want to restore a file from the engineering volume that is shown in the exhibit. When you click Restore in OnCommand Unified Manager, there are no files available to restore. Referring to the exhibit, what caused this problem?

- A. The engineering volume is currently online.
- B. Workflow Automation is not configured to restore files from Snapshot copies.

- C. No Snapshot copies exist for the engineering volume.
- D. The engineering volume is unprotected.

Correct Answer: B

QUESTION 3

A client has two regional offices that use SnapMirror cross-site replication to host disaster-recovery mirrors for both offices. A co-worker at one office is requesting read/write access to one of the volume mirrors. You must accomplish this task without interrupting data access or replication. In this scenario, how should you proceed?

- A. Create a FlexVol volume on the destination cluster so that it is writeable for the co-worker.
- B. Create a FlexClone volume based on one of the Snapshot copies at the destination so that it is writeable for the co-worker.
- C. Break the SnapMirror relationship between the local and remote clusters, and make the destination volume writeable for the co-worker.
- D. Modify the export policy on the destination mirror volume so that it is now writeable for the co-worker.

Correct Answer: B

QUESTION 4

Your customer wants to implement SVM DR, but the customer is not certain whether the identity-preserve parameter should be enabled. The customer explains that the source and destination clusters are in different network subnets. In this scenario, which SVM DR solution should the customer use?

- A. SVM DR using the identity-preserve parameter disabled and the default SnapMirror policy.
- B. SVM DR using the identity-preserve parameter enabled and then administratively take the data LIFs offline on the DR cluster.
- C. SVM DR with the identity-preserve parameter enabled and a SnapMirror policy with the discard-configs network parameter.
- D. SVM DR with the identity-preserve parameter enabled and the default SnapMirror policy.

Correct Answer: D

QUESTION 5

A customer wants to assign a user to a build-in SnapCenter RBAC Role that will allow them to review and start existing SnapMirror processes only. In this scenario, which Role will allow the customer to accomplish this task?

- A. App Backup and Clone Admin

B. Infrastructure Admin

C. Backup and Clone Viewer

D. SnapCenter Admin

Correct Answer: D
